

ACHIEVE YOUR AGENCY'S OBJECTIVES USING AUTOMATED TRAFFIC SIGNAL PERFORMANCE MEASURES

INSTITUTE OF TRANSPORTATION ENGINEERS WEBINAR PART 1 – APRIL 9, 2014

ITE Webinar Series on Automatic Traffic Signal Performance Measures (SPMs)

- ▶ Achieve Your Agency's Objectives Using SPMs
April 9, 2014 12:00 pm to 1:30 pm.
- ▶ SPMs Case Studies
May 7, 2014 12:00 pm to 1:30 pm.
- ▶ Critical Infrastructure Elements for SPMs
June 11, 2014 12:00 pm to 1:30 pm.

Automated Traffic Signal Performance Measures

Technology Implementation Group: 2013 Focus Technology

<http://tig.transportation.org/>

Mission: Investing time and money to accelerate its adoption by agencies nationwide

ACHIEVE YOUR AGENCY'S OBJECTIVES USING AUTOMATED TRAFFIC SIGNAL PERFORMANCE MEASURES

INSTITUTE OF TRANSPORTATION ENGINEERS WEBINAR PART 1 – APRIL 9, 2014
PRESENTED BY DARCY BULLOCK, PURDUE UNIVERSITY, APRIL, 9 2013

ACHIEVE YOUR AGENCY'S OBJECTIVES USING AUTOMATED TRAFFIC SIGNAL PERFORMANCE MEASURES

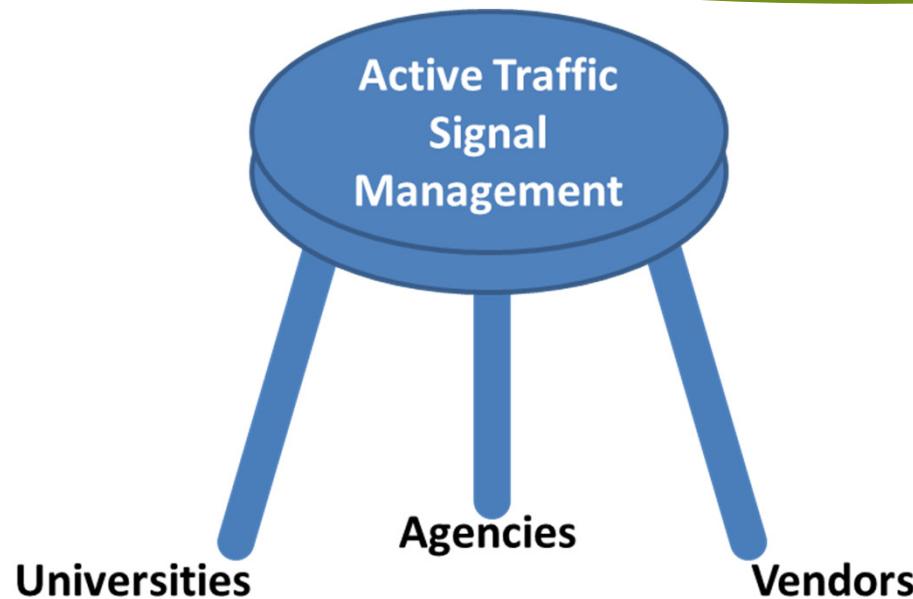

INSTITUTE OF TRANSPORTATION ENGINEERS WEBINAR PART 1 – APRIL 9, 2014
PRESENTED BY JIM STURDEVANT, INDOT, APRIL, 9 2013

How did we get here- Indiana Perspective

INDIANA HISTORY AND PATH TO SPM

- Purdue / INDOT
Partnership
- Shared Vision
- Industry
Collaboration

Emerging Shared Vision

1. Develop infrastructure and procedures to systematically prioritize investing engineering resources
2. Assess that impact

Dual Cabinets at Purdue 1998-2000

Photo: Indiana Joint Transportation Research Program

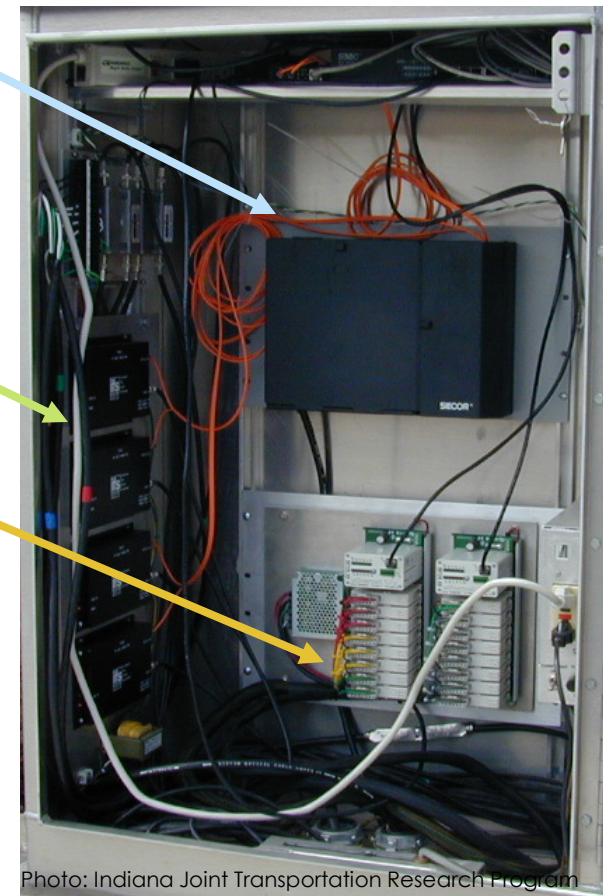

Signal Cabinet (INDOT)

Photo: Indiana Joint Transportation Research Program

Instrumentation Cabinet (Purdue)

- ▶ Fiber Connection
- ▶ Video Modems
- ▶ IP Based I/O Monitoring

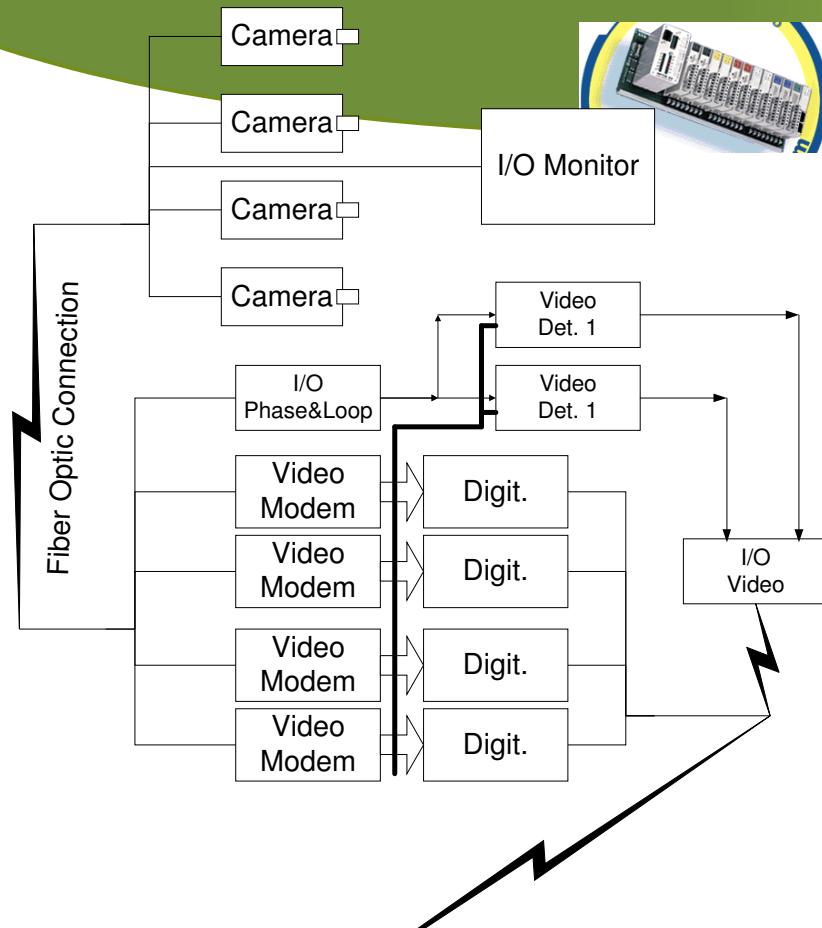

Purdue Indoor Facility

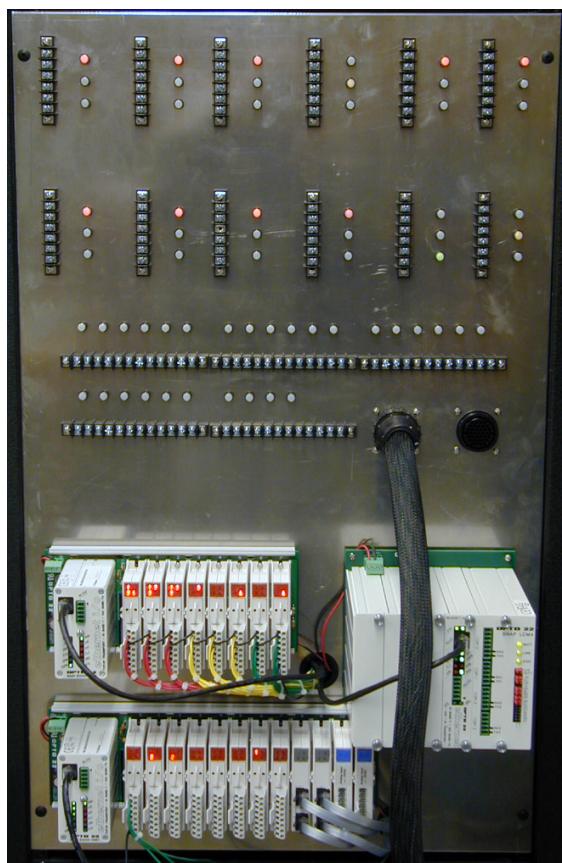

Photo: Indiana Joint Transportation Research Program

Indoor End of Equipment

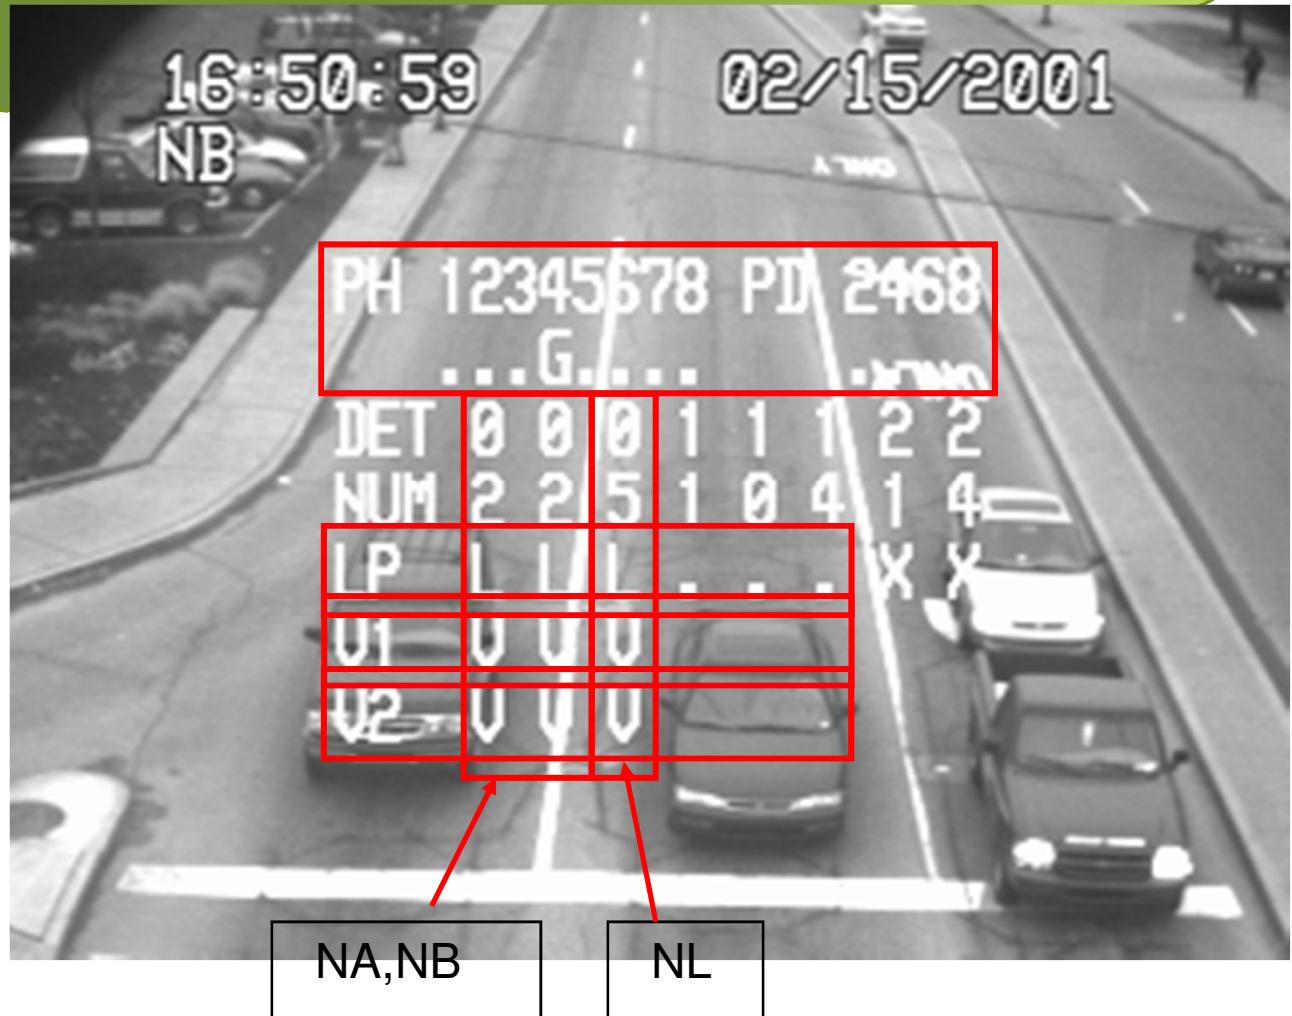

Indoor Interface: Signal Status & Cabinet

Pre-2004 Text Overlay- Phase calls and status

- Phase Indication
- ILD Status
- VID1 Status
- VID2 Status

Early 2000's collaboration and problem solving

- ▶ Fall 2001 Purdue Completed study of video detection
 - ▶ Report identified some issues
 - ▶ INDOT verified issues in field

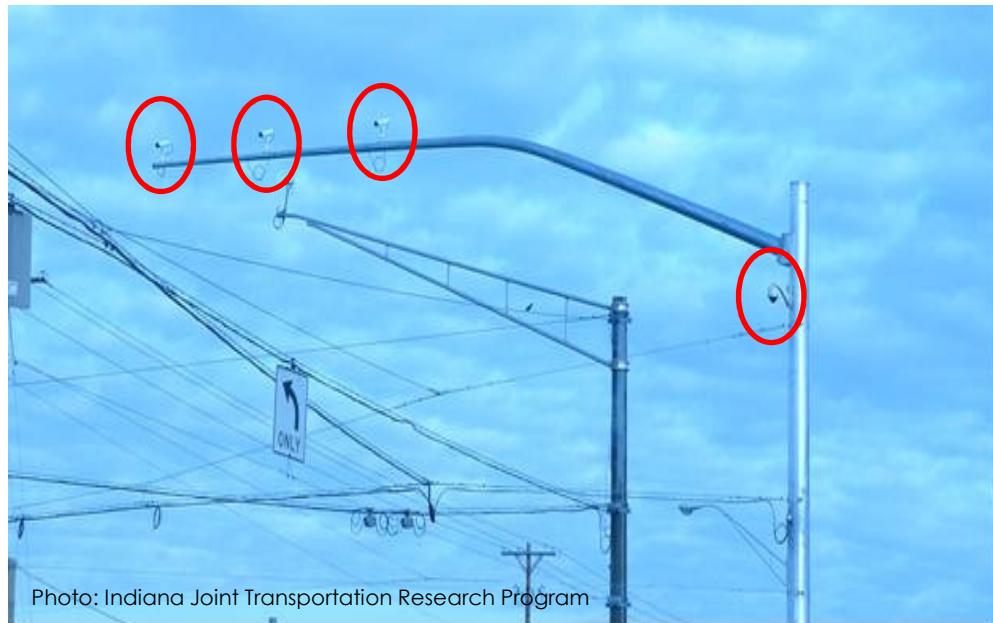

2002-2003 Indiana Detection Performance Concerns

- ▶ Summer 2002
 - ▶ Vendors proposed new design procedures for poles/arms/camera placement. **..Will it work?**
 - ▶ INDOT drafts design and performance specifications **..Will sensors meet it?**
 - ▶ INDOT plans for a test site with optimal camera placement **..With capabilities to measure performance!**
- ▶ Fall 2003
 - ▶ INDOT Constructs test facility in Noblesville to evaluate design and performance specifications
 - ▶ Laid the ground work for further research.

High resolution intersection data “Instrumented Intersections” Built

- ▶ Noblesville, IN
 - ▶ Suburban, High speed
 - ▶ Completed summer 2003.
- ▶ West Lafayette, IN
 - ▶ Urban, Pedestrians
 - ▶ Completed summer 2004

Lots of sensors!

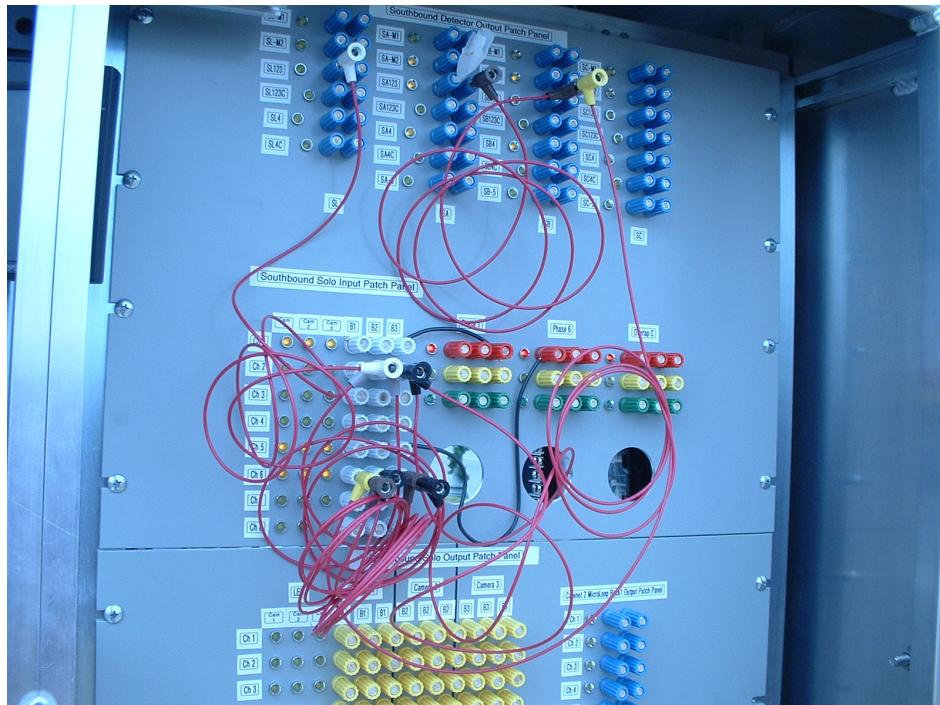

Lots of Conduit!

Ethernet

FTP Protocol

Translate
to CSV

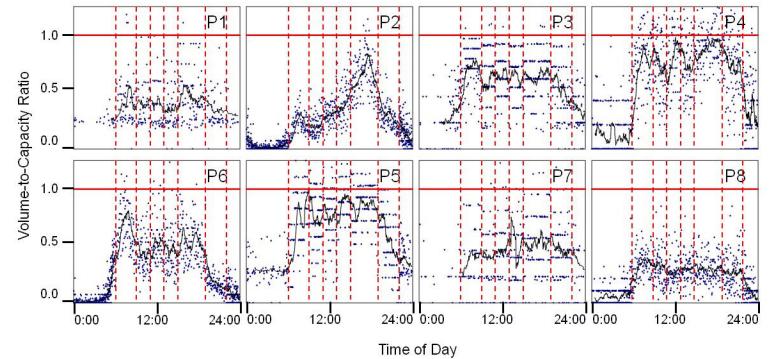

NCHRP 3-79a

Sept 2008-Dec 2009

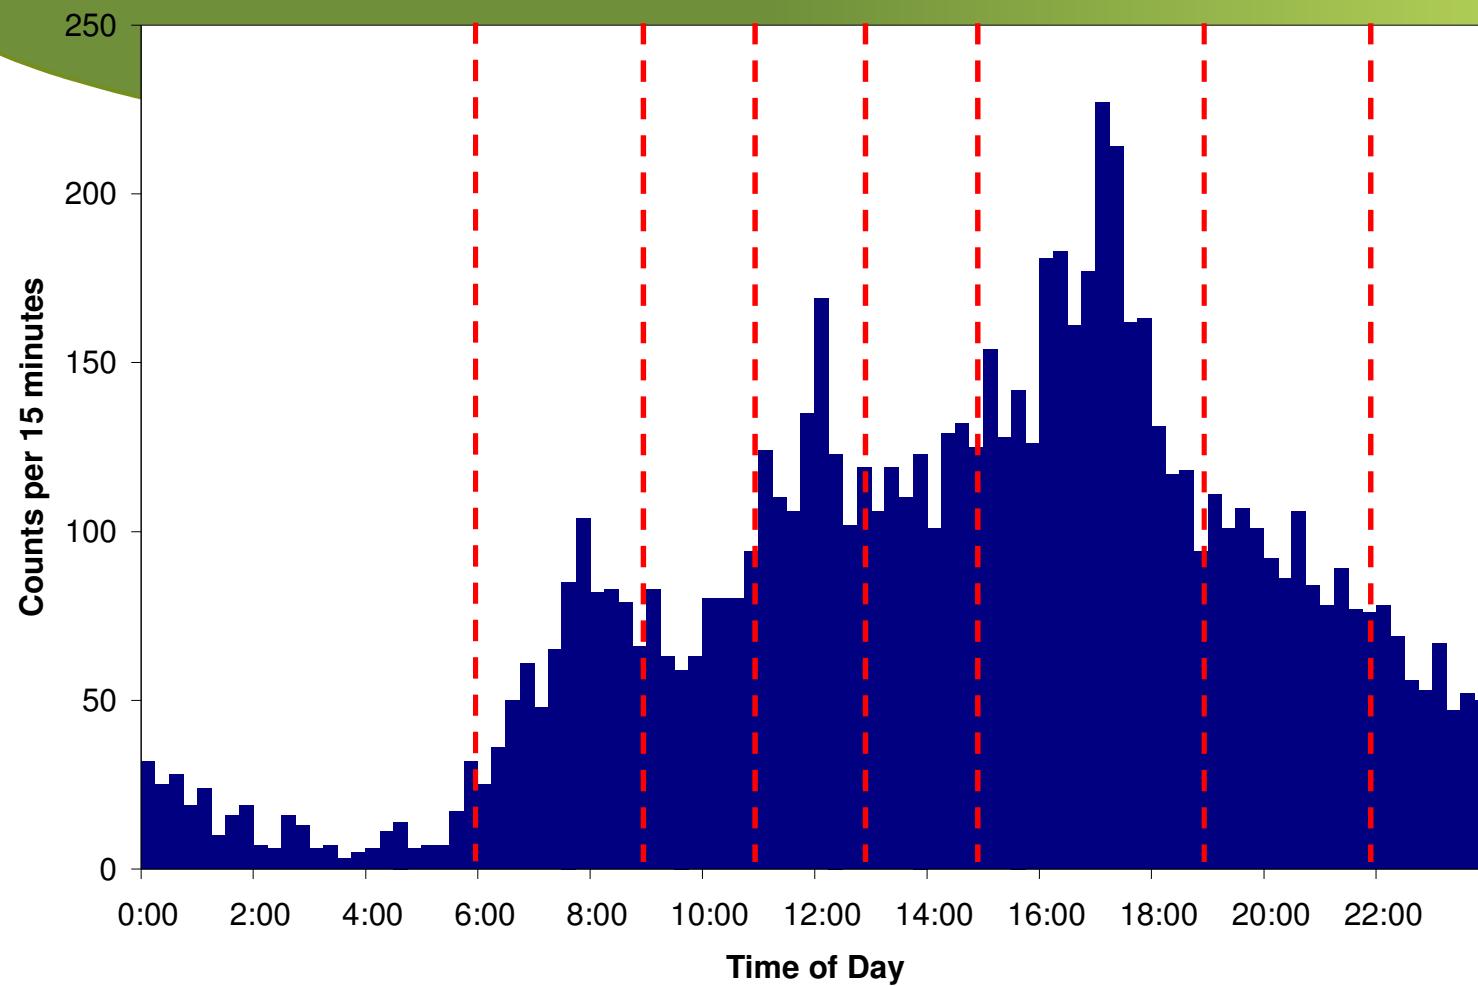

- ▶ Accepted Traffic Engineering Methods
- ▶ Applied to Traffic Controllers
- ▶ Picture book methods
- ▶ Surrogate for a trip to the field

2006-2008 Intersection Metrics

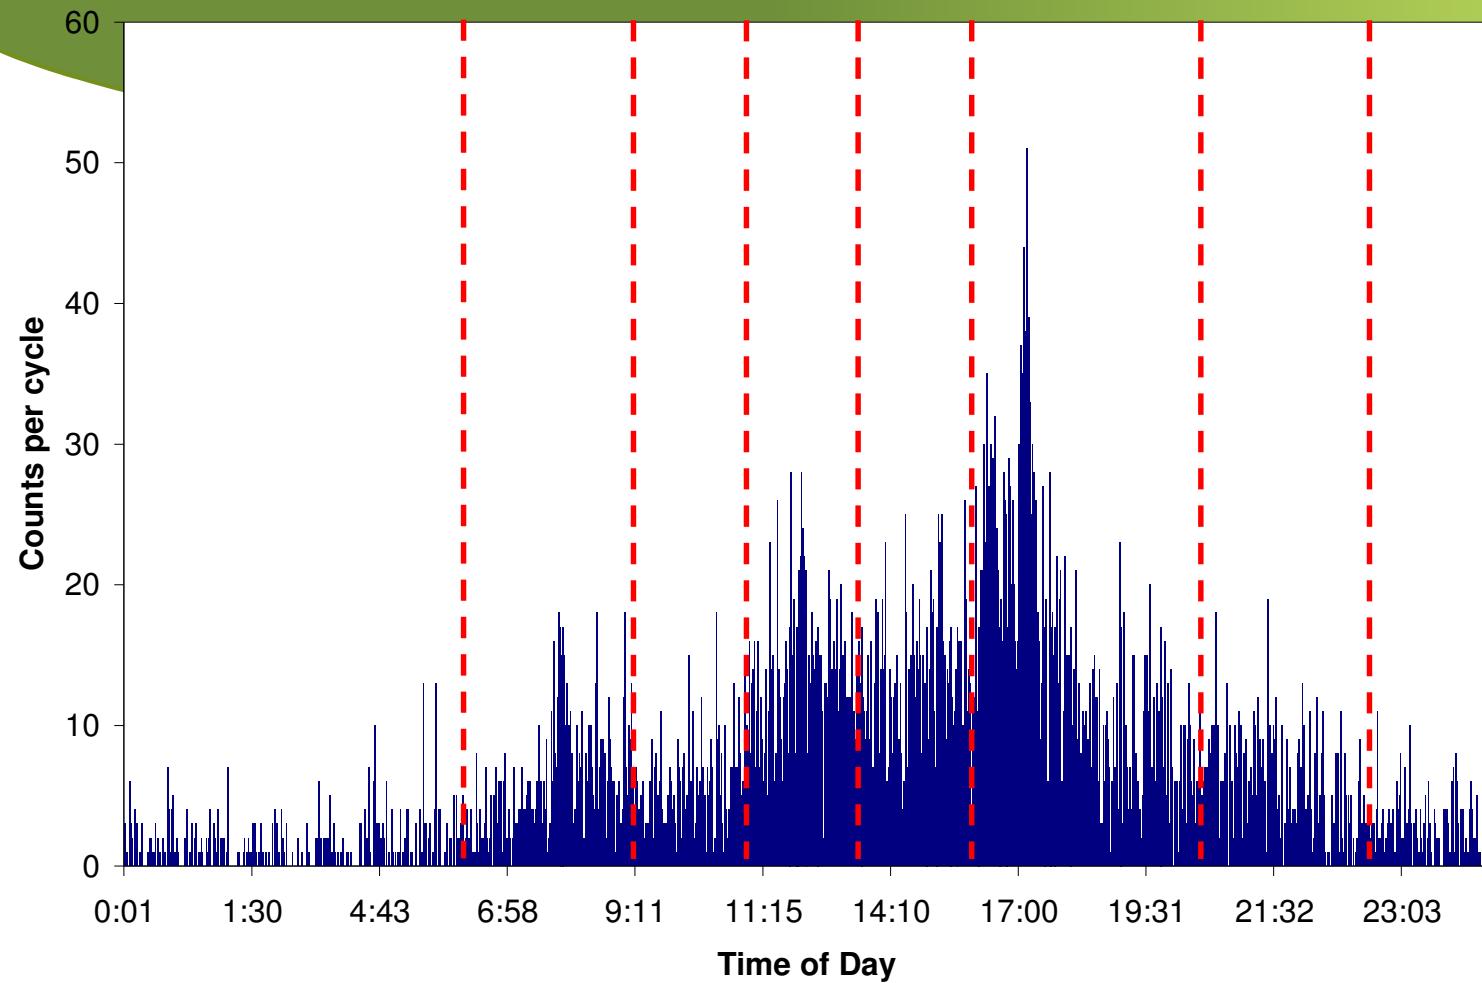

- ▶ Volume to Capacity
- ▶ Intersection Saturation
- ▶ Lane by Lane detection
- ▶ Actuated Coordination
- ▶ Counting detectors
- ▶ Advance detectors

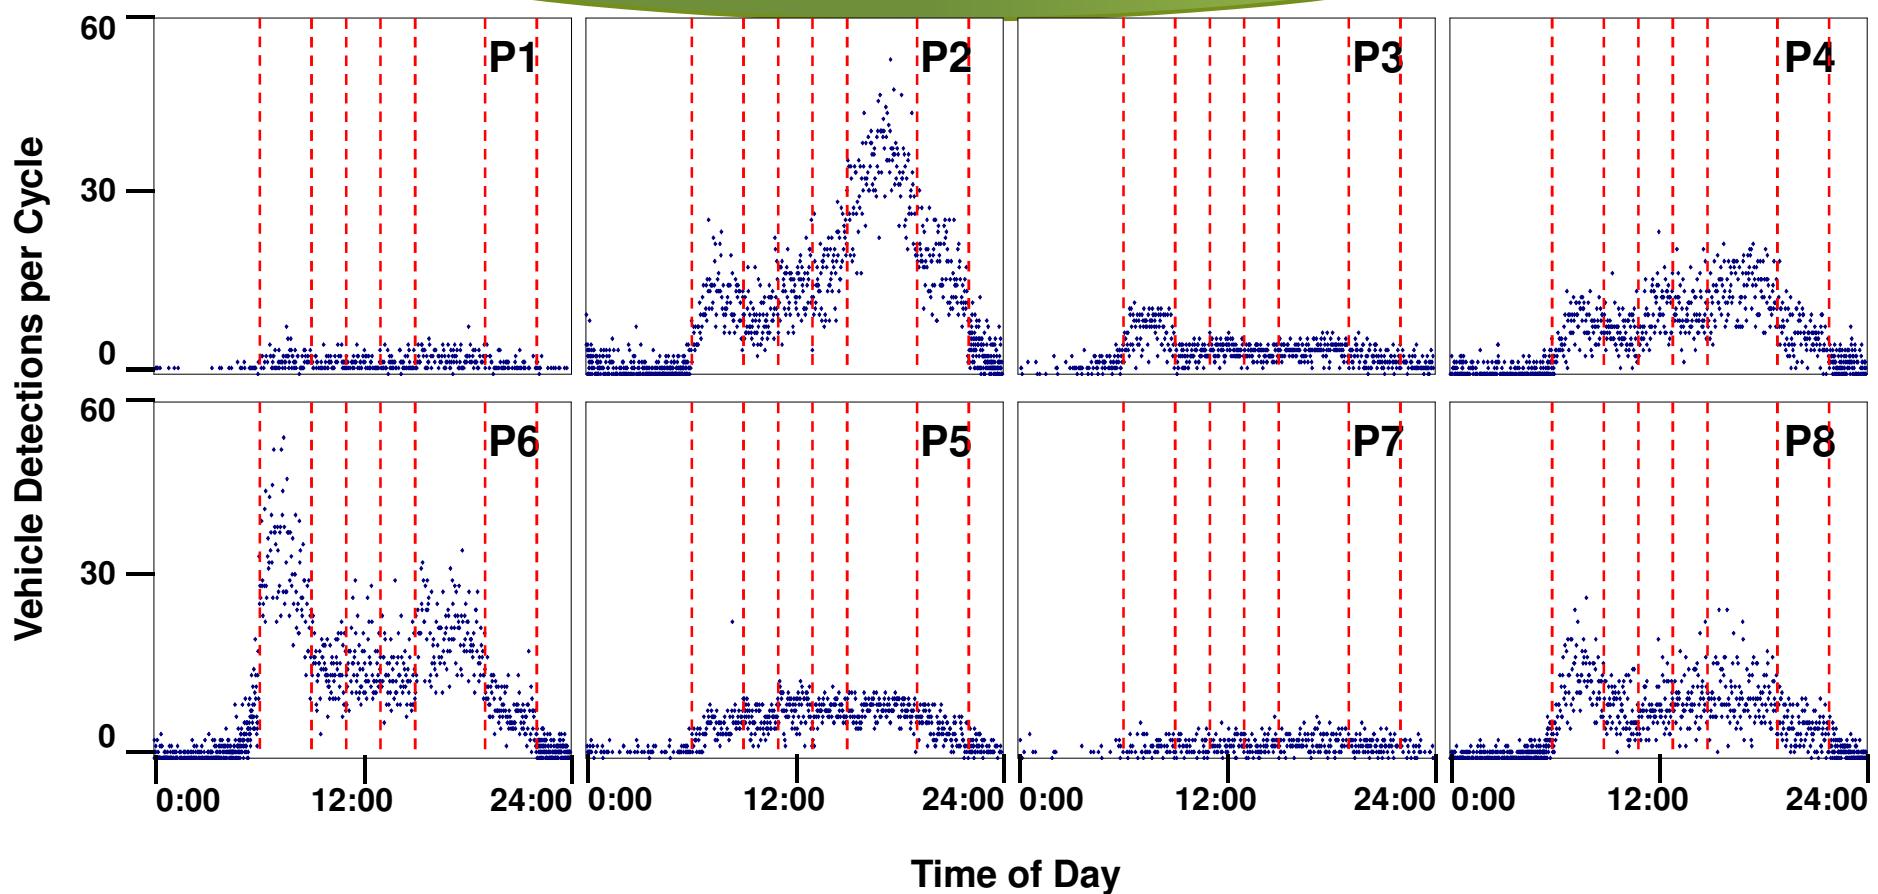

15-Minute Counts (Phase “n”)

Cycle-By-Cycle Counts (Phase “n”)

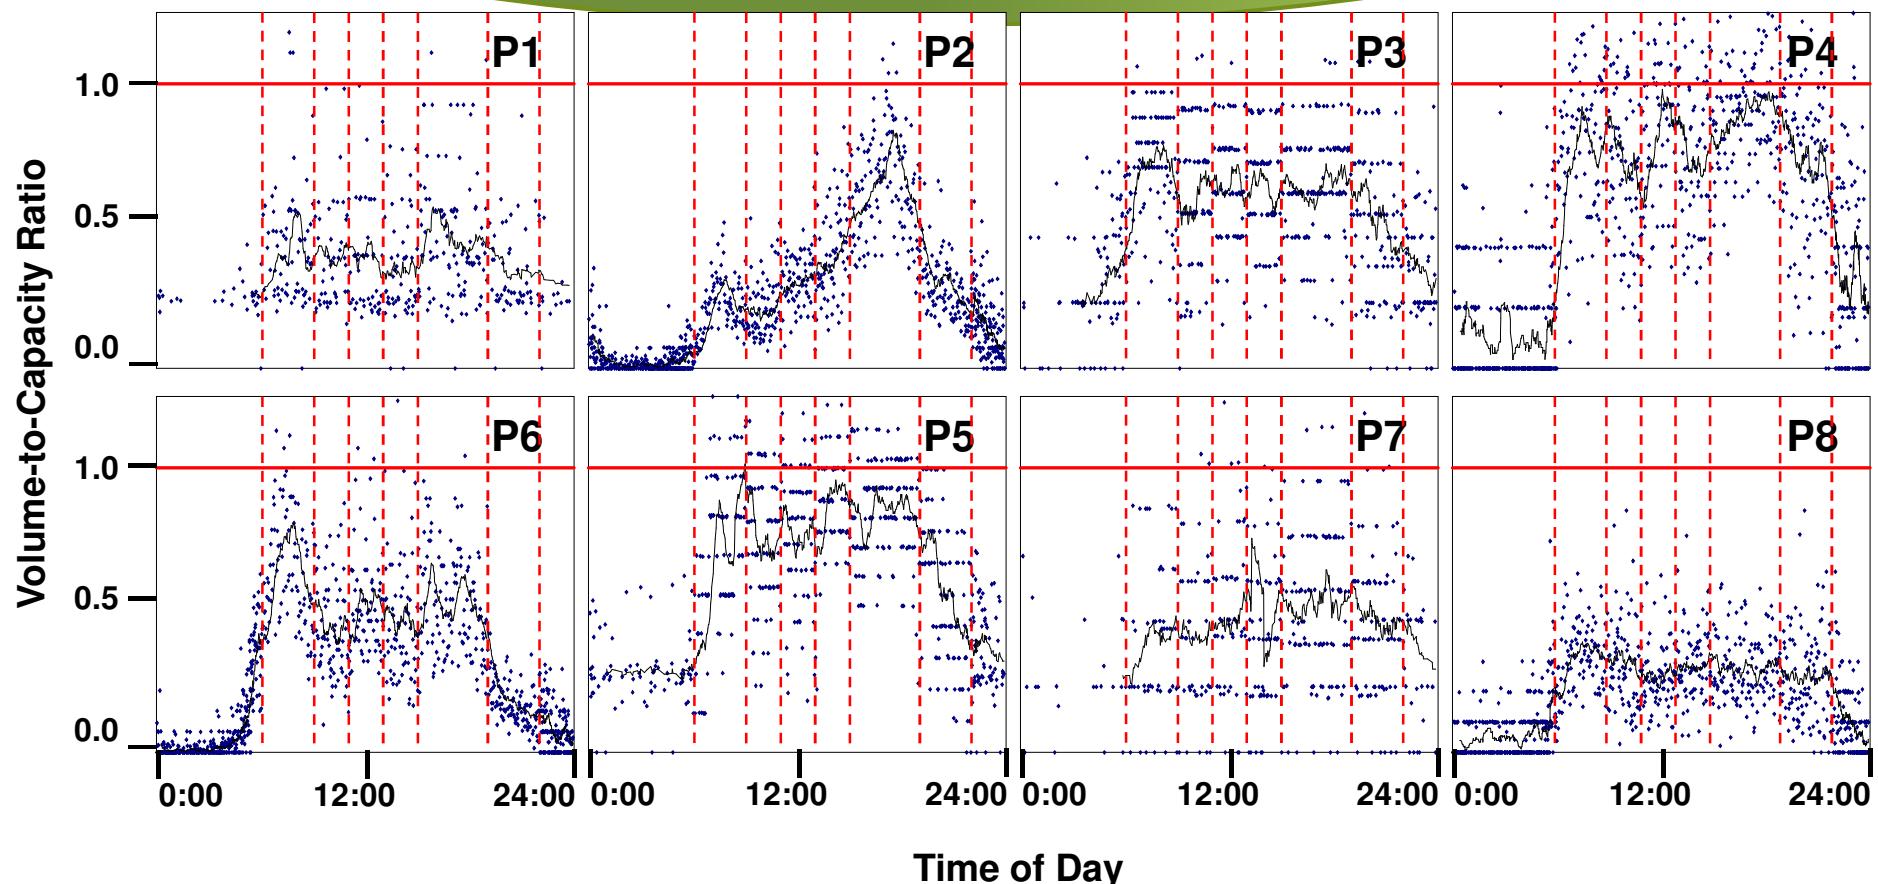

24 Hour Counts by phase

35

V/C Ratios by Phase, 24 Hours

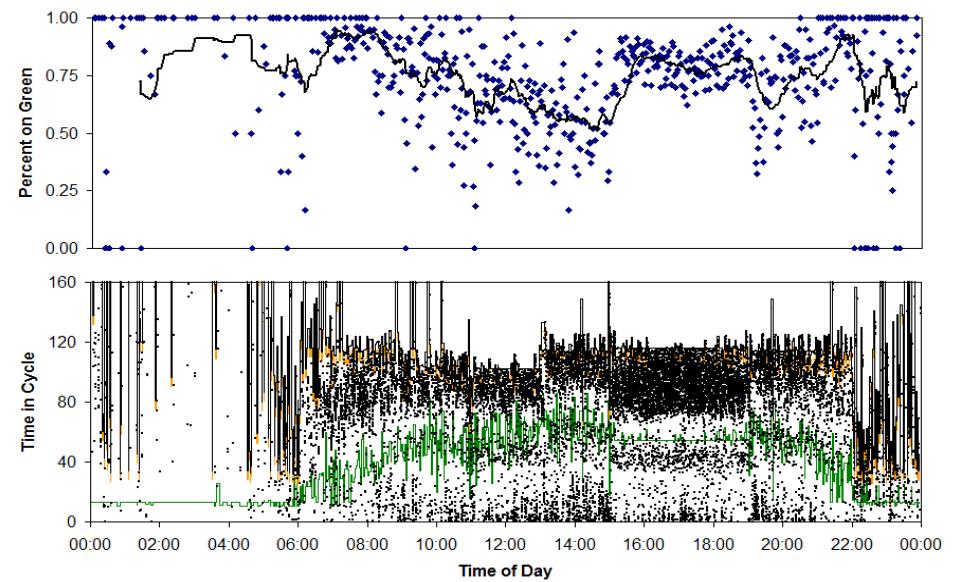

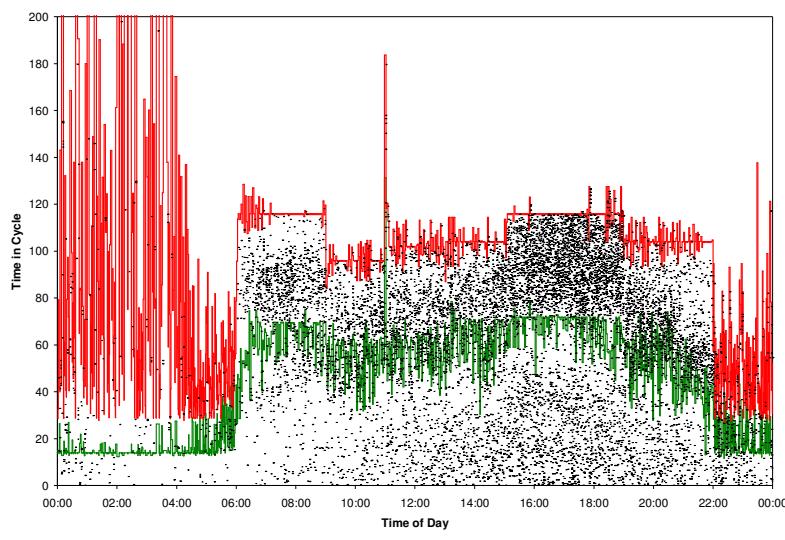

3/13/2008- Systemwide Metrics begin

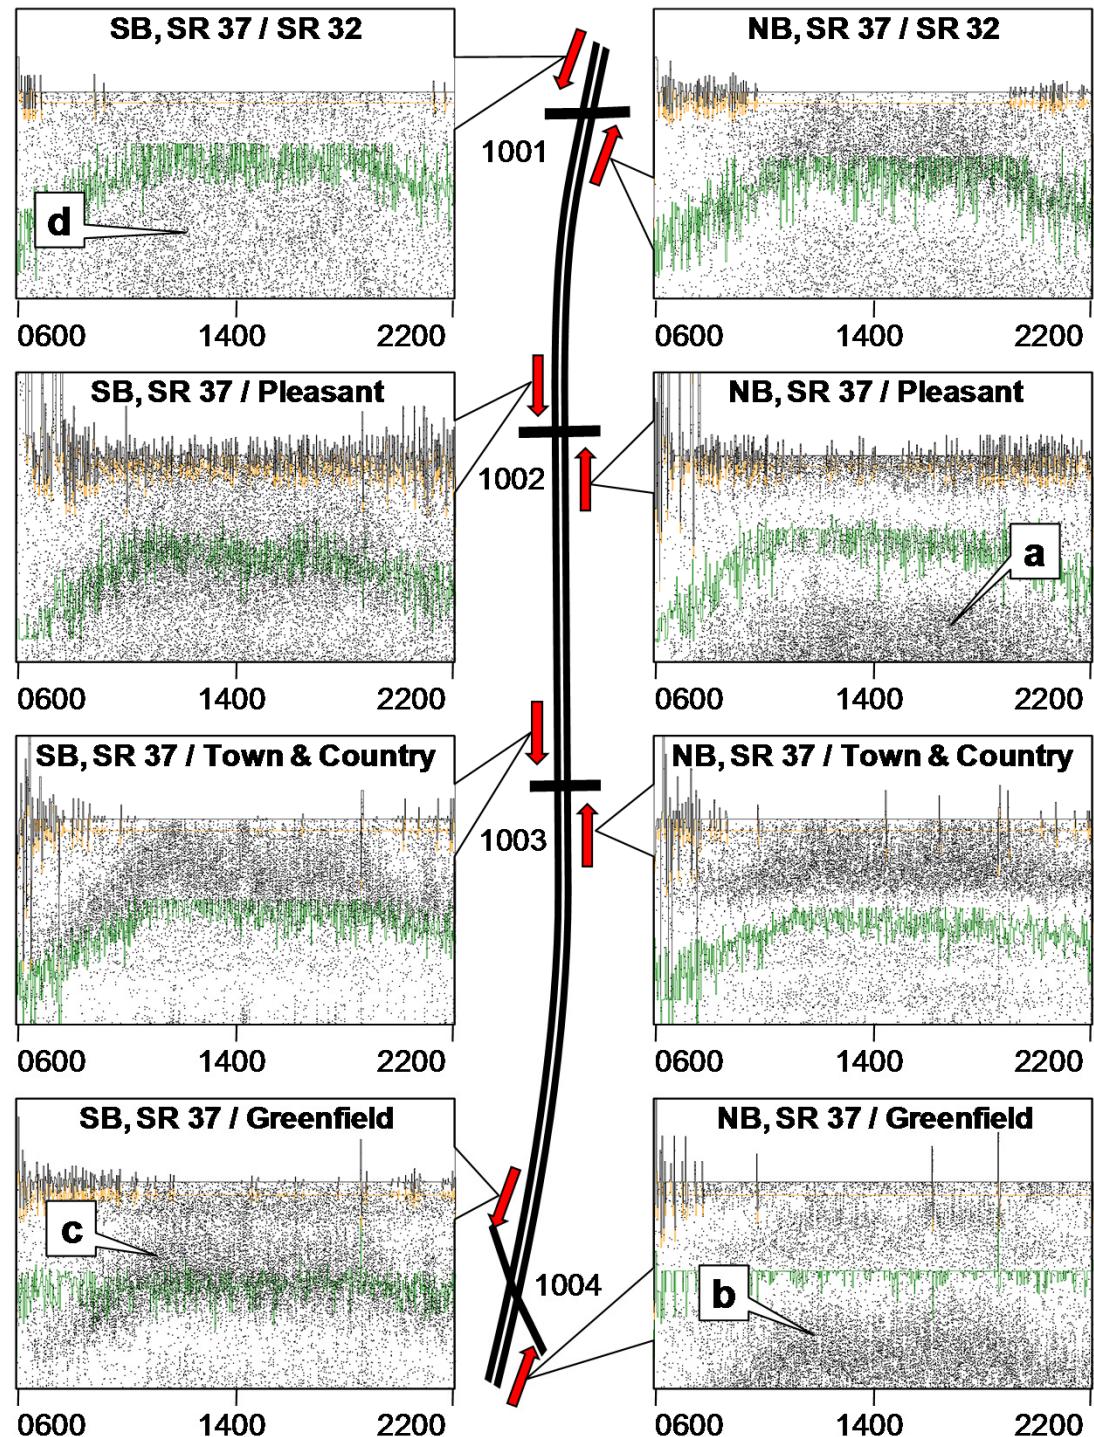

March 13, 2008

Early PCD and POG- Created

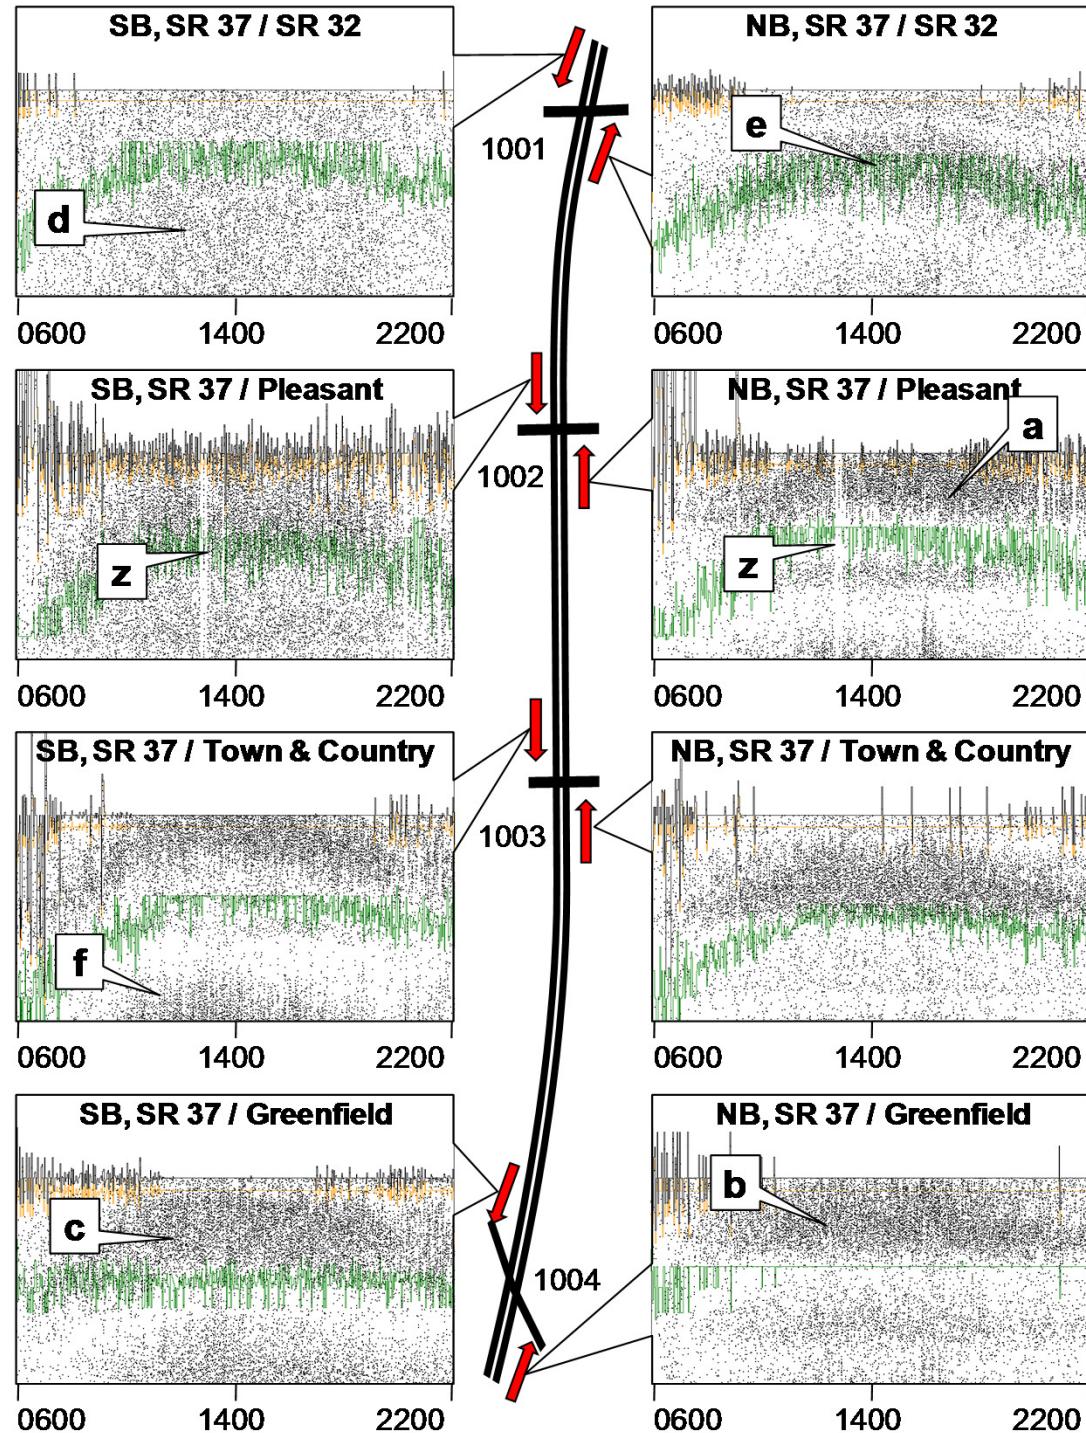

4/30/08

Before

After

2014:Enumeration Support by 5 vendors

- ▶ Econolite
- ▶ Peek
- ▶ Eagle
- ▶ Intelight
- ▶ Naztec (Beta)

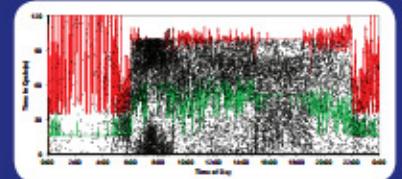

<http://dx.doi.org/10.5703/1288284315018>

2014:Monograph documenting

- Volumes
- v/c ratios
- Pedestrian Service
- Preempt Operation
- PCD
- Link Pivot Optimization
- Split Failures (GOR/ROR)
- Probe Data Assessment Techniques
- Detector Mapping

PERFORMANCE MEASURES FOR TRAFFIC SIGNAL SYSTEMS

An Outcome-Oriented Approach

Christopher M. Day, Darcy M. Bullock, Howell Li, Stephen M. Remias, Alexander M. Hainen, Richard S. Freije, Amanda L. Stevens, James R. Sturdevant, and Thomas M. Brennan

ACHIEVE YOUR AGENCY'S OBJECTIVES USING AUTOMATED TRAFFIC SIGNAL PERFORMANCE MEASURES

INSTITUTE OF TRANSPORTATION ENGINEERS WEBINAR PART 1 – APRIL 9, 2014
PRESENTED BY ROB CLAYTON, UDOT

Utah Department of Transportation

Brief Facts

- Population 2,800,000 (34th largest state)
 - 80% live along the Wasatch Front
- Land Area: 84,900 sq. mi (13th largest state)
- 1900 Traffic Signals in the State of Utah
 - 1150 owned and operated by UDOT
 - 750 owned and operated by cities /counties
- All partners share same ITS communications
 - 83% of UDOT signals connected
 - 71% of non-UDOT signals connected

Quality Improvement Team (QIT) 2011

John Njord, former UDOT Director & former AASHTO President:

*“What would it take for UDOT’s
Traffic Signal Operations to be
World Class?”*

Njord, John. , Portrait. August 28, 2007. Retrieved from udot.utah.gov.

What Defines World-Class Signals?

Signal
Equipment
Fully
Functional

Signal
Timing
Optimal

Active
Monitoring
(SPMs)

World Class Signals Best Practices Identified

World Class Best Practice	UDOT Practice	Grade
SIGNAL OPERATIONS		
Use of traffic signal control software to manage signal operations	UDOT uses Siemens i2 software, as do all of our partner agencies.	
Re-time signals every 30 to 36 months	Not possible with current resources. Efforts focus on obvious problems.	
Automated, real-time monitoring of signal system health and performance	None	
Performance measurement of signal operations	None	
Quality signal timing during construction	Not required or common. Large projects sometimes hire timing consultants.	
Quality signal timing during incidents, civic events, and weather events	Limited. There are no stated goals, or resources identified to support those goals.	
Implementation of adaptive signal operations	2 demonstration projects: SCATS in Park City; ACS Lite in Heber	

Sample QIT Recommendations (July 2011)

“Transition from reactive to proactive signal maintenance by increasing signal maintenance funding.”

“Require that communications and signal detection be maintained during construction projects, and require signals to be fully functional before turning them on.”

“Implement real-time monitoring of system health and quality of operations.”

Hats off!

Purdue University & Indiana DOT
Paving the Way since 2005

Automated Traffic Signal Performance Metrics

Darcy Bullock

Jim Sturdevant

Performance Metrics Goals

- ▶ Transparency and Unrestricted Access
 - ▶ No Special Software – No Passwords – No Firewalls
- ▶ Access for Everyone
 - ▶ Intra Agency
 - ▶ Consultants
 - ▶ Academia
 - ▶ MPO's
 - ▶ Local & Federal Governments
 - ▶ Executive Leaders
 - ▶ Public

Automated Signal Performance Metrics (How does it work?)

1. Traffic signal controllers – 1/10th s. data logger time-stamps
(Event Code, Parameter, Time Stamp)
 - Econolite (ASC3; Cobalt)
 - Intelight ATC
 - Naztec (Beta)
 - PEEK ATC
 - Siemens Linux / ATC
2. Communications or storage memory on controllers needed
3. Server to store hi-def Indiana enumerations
4. FTP connections made every 10 minutes to signals on system
5. Enumerations analyzed and graphed

CENTRAL SIGNAL SYSTEM NOT USED OR NEEDED

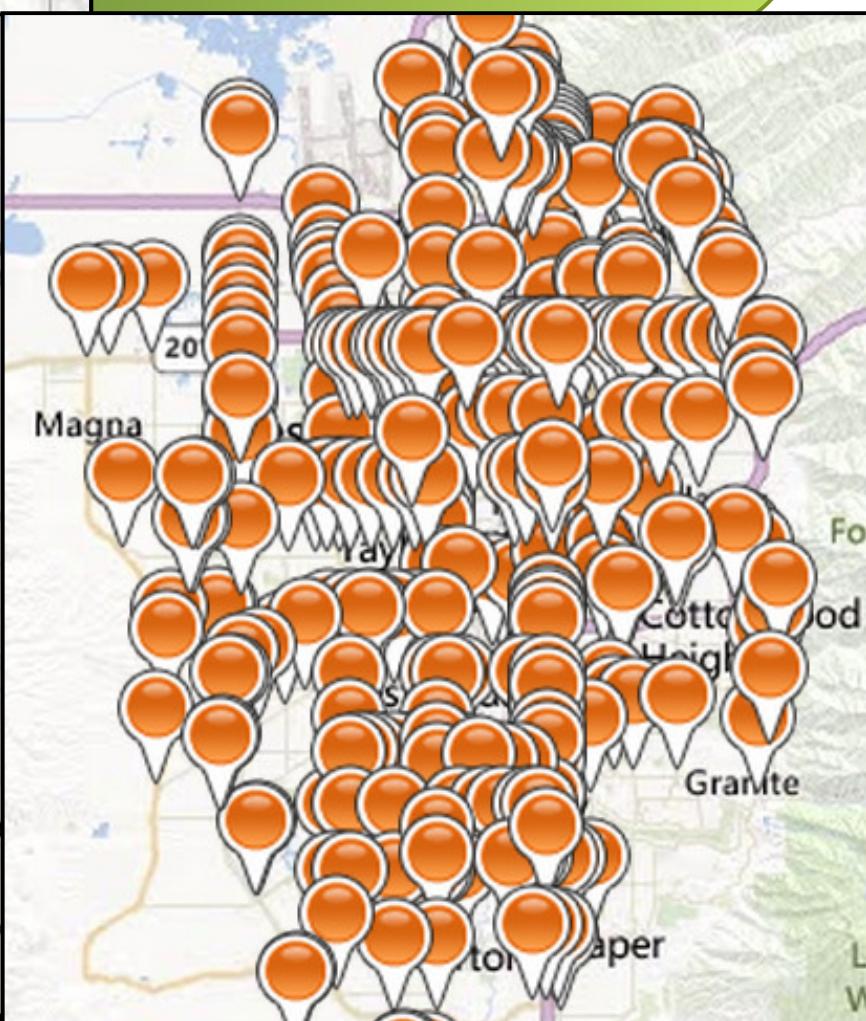

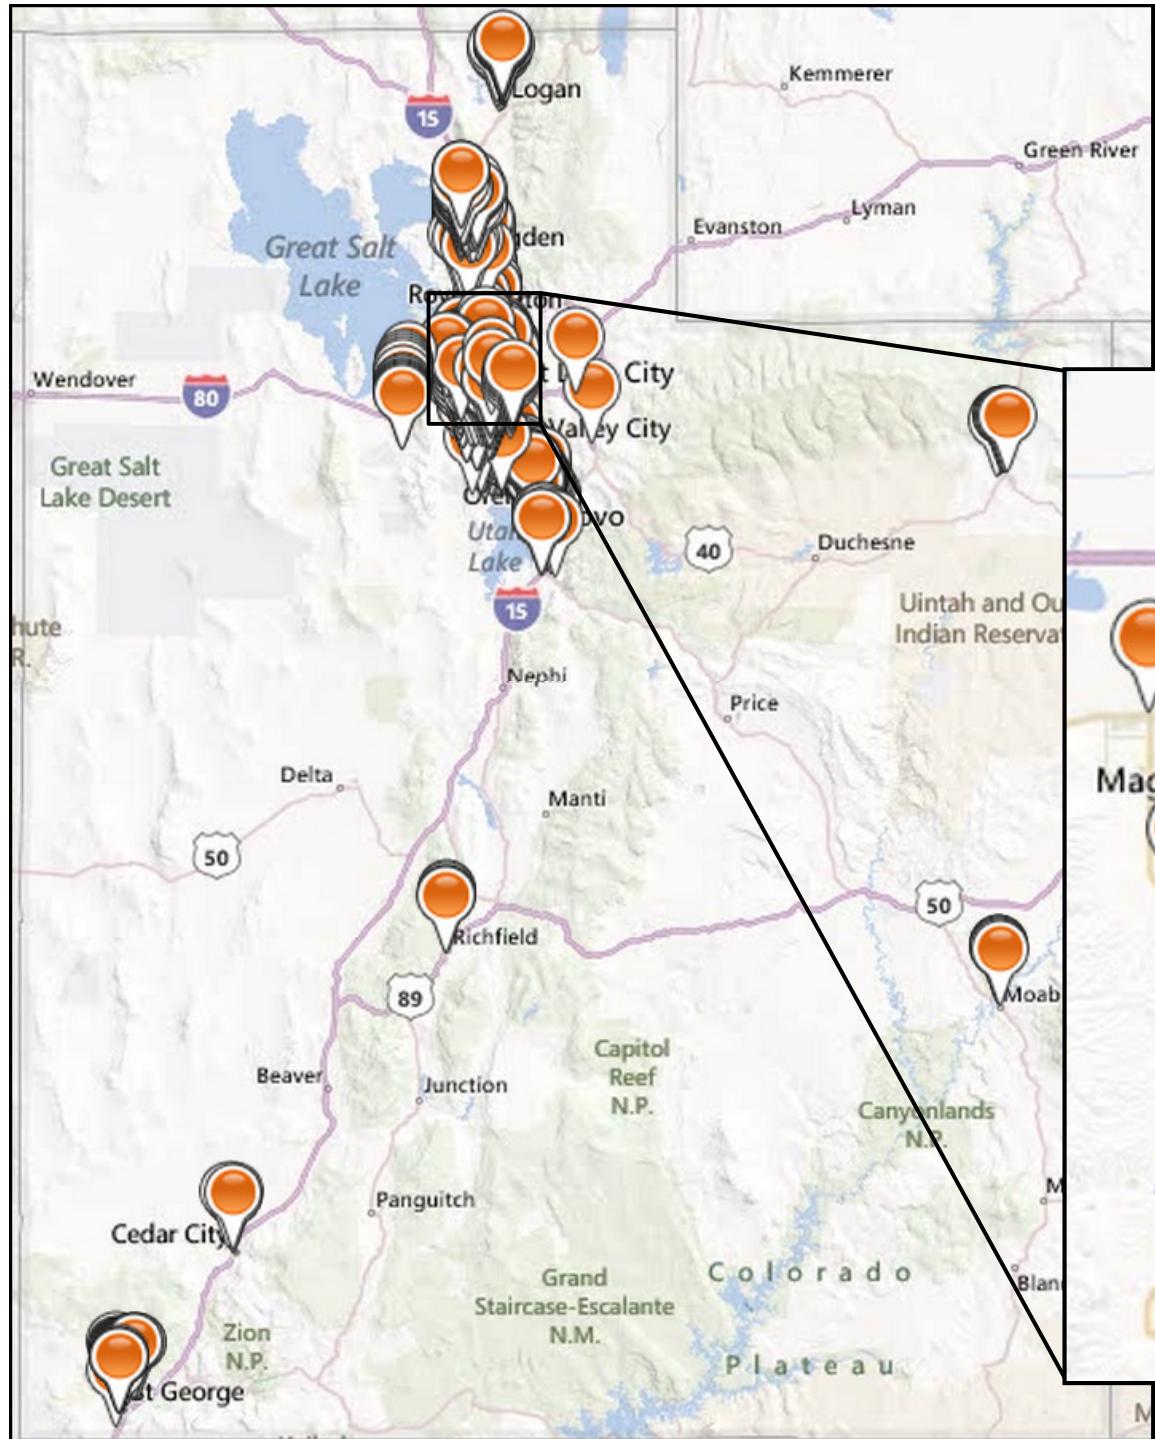

(The signal metrics are independent of any central signal system)

Salt Lake Valley

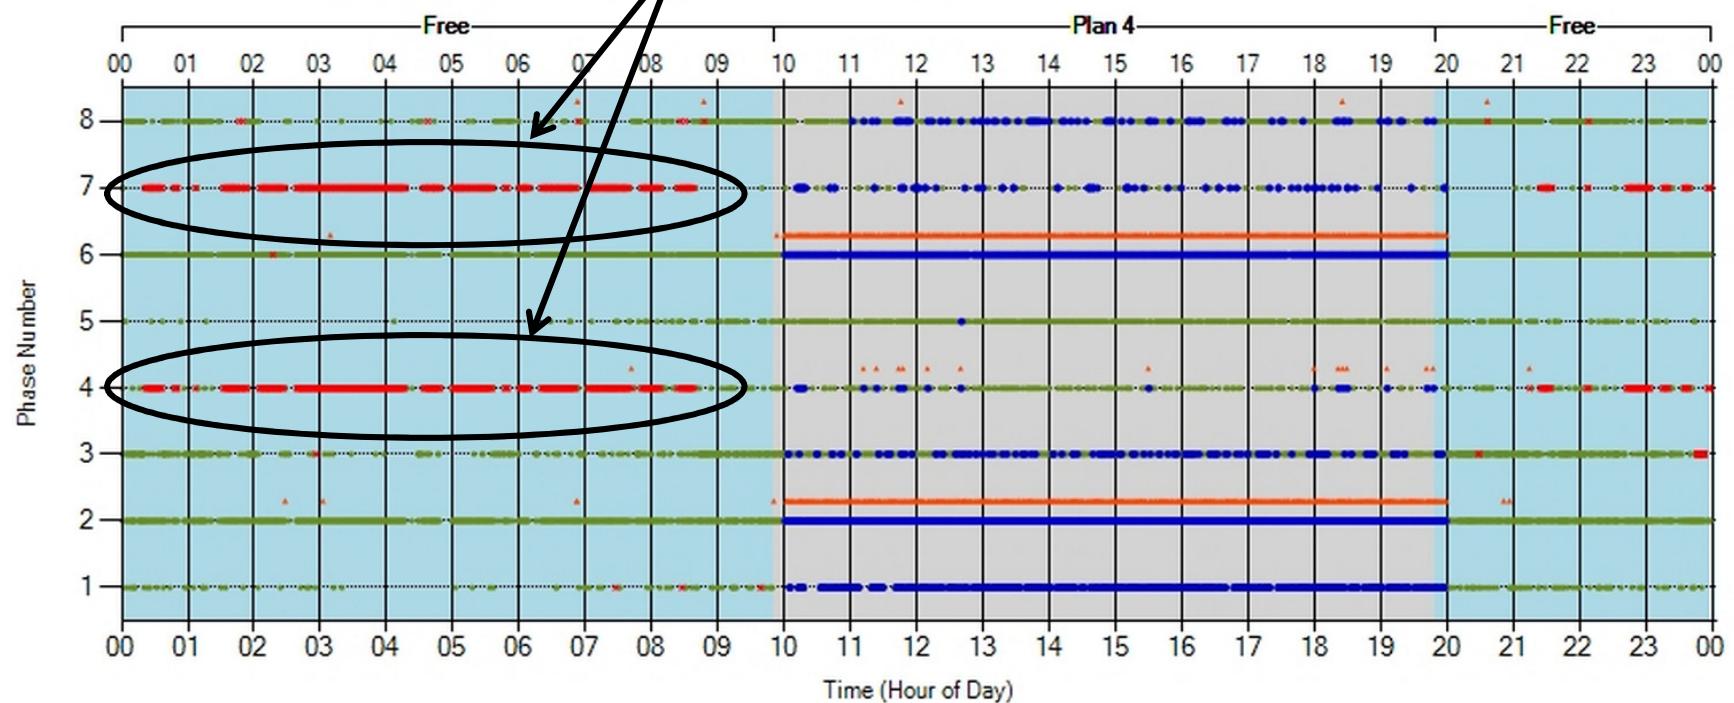

SPM Metric	Detection Requirements
Purdue Phase Termination	No detection needed or used
Split Monitor	No detection needed or used
Purdue Coordination Diagram	Setback count (350 ft – 400 ft)
Approach Volume	Setback count (350 ft – 400 ft)
Approach Delay	Setback count (350 ft – 400 ft)
Arrivals on Red	Setback count (350 ft – 400 ft)
Executive Reports	Setback count (350 ft – 400 ft)
Approach Speed	Setback count w/ speed (350 ft – 400 ft)
Turning Movement Counts	Stop bar (lane-by-lane) count
Purdue Travel Time Diagram	Probe travel time data (GPS)

Phases 4 & 7 Maxing Out Only at Night

Before Condition: Riverdale Road & 700 West, Ogden, UT – Sunday, March 24, 2013

Video Detection not working well at night

Minor street through & left turn max out at night only

Gapout

● Max out

● Force off

● Pedestrian activation (shown above phase line)

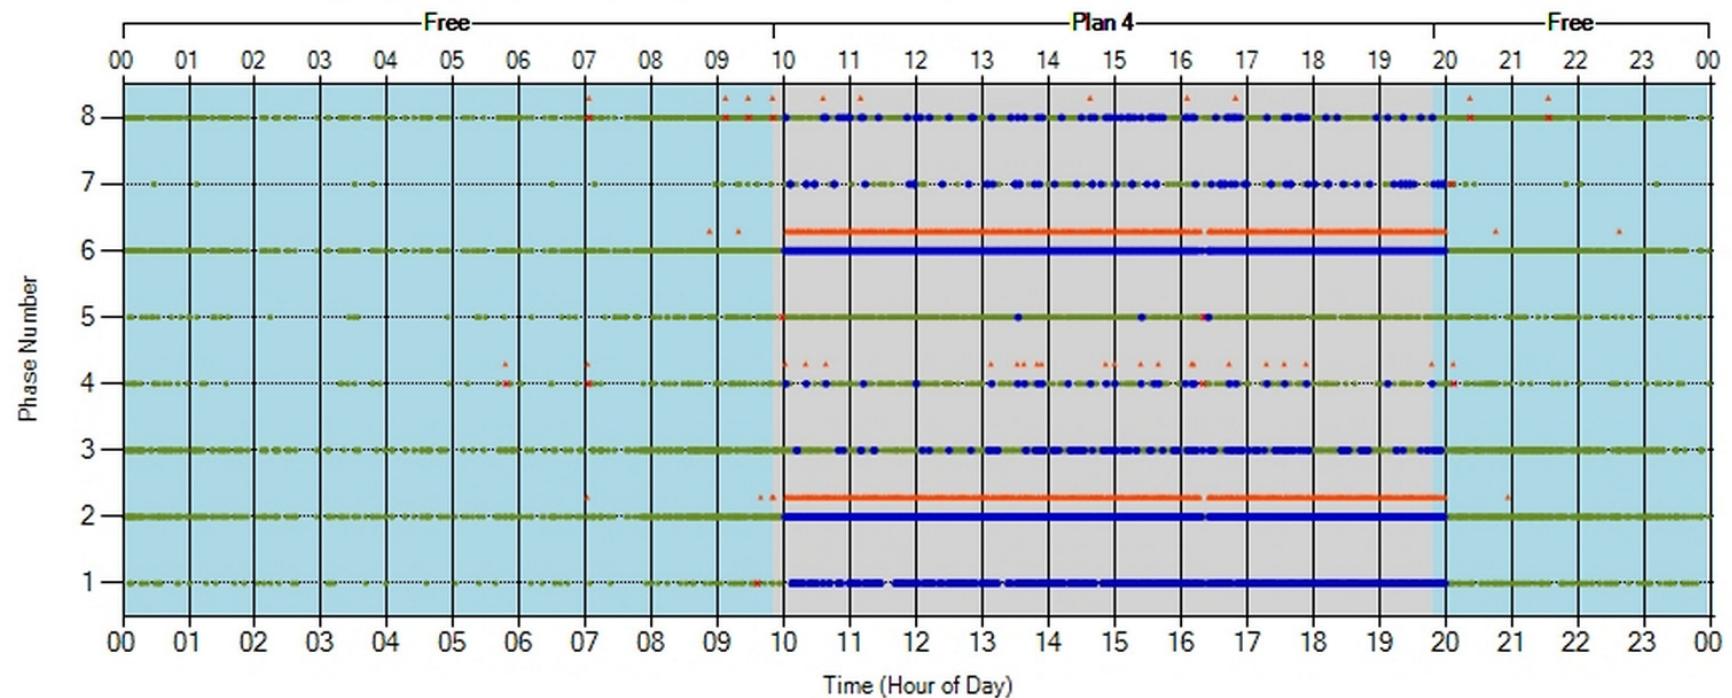

Skip

Metric: Purdue Phase Termination

Phases 4 & 7 Maxing Out at Night - Fixed

After Condition: Riverdale Road & 700 West, Ogden, UT – Sunday, March 31, 2013

Video Detection replaced with a different detector technology

● Gapout

● Max out

● Force off

● Pedestrian activation (shown above phase line)

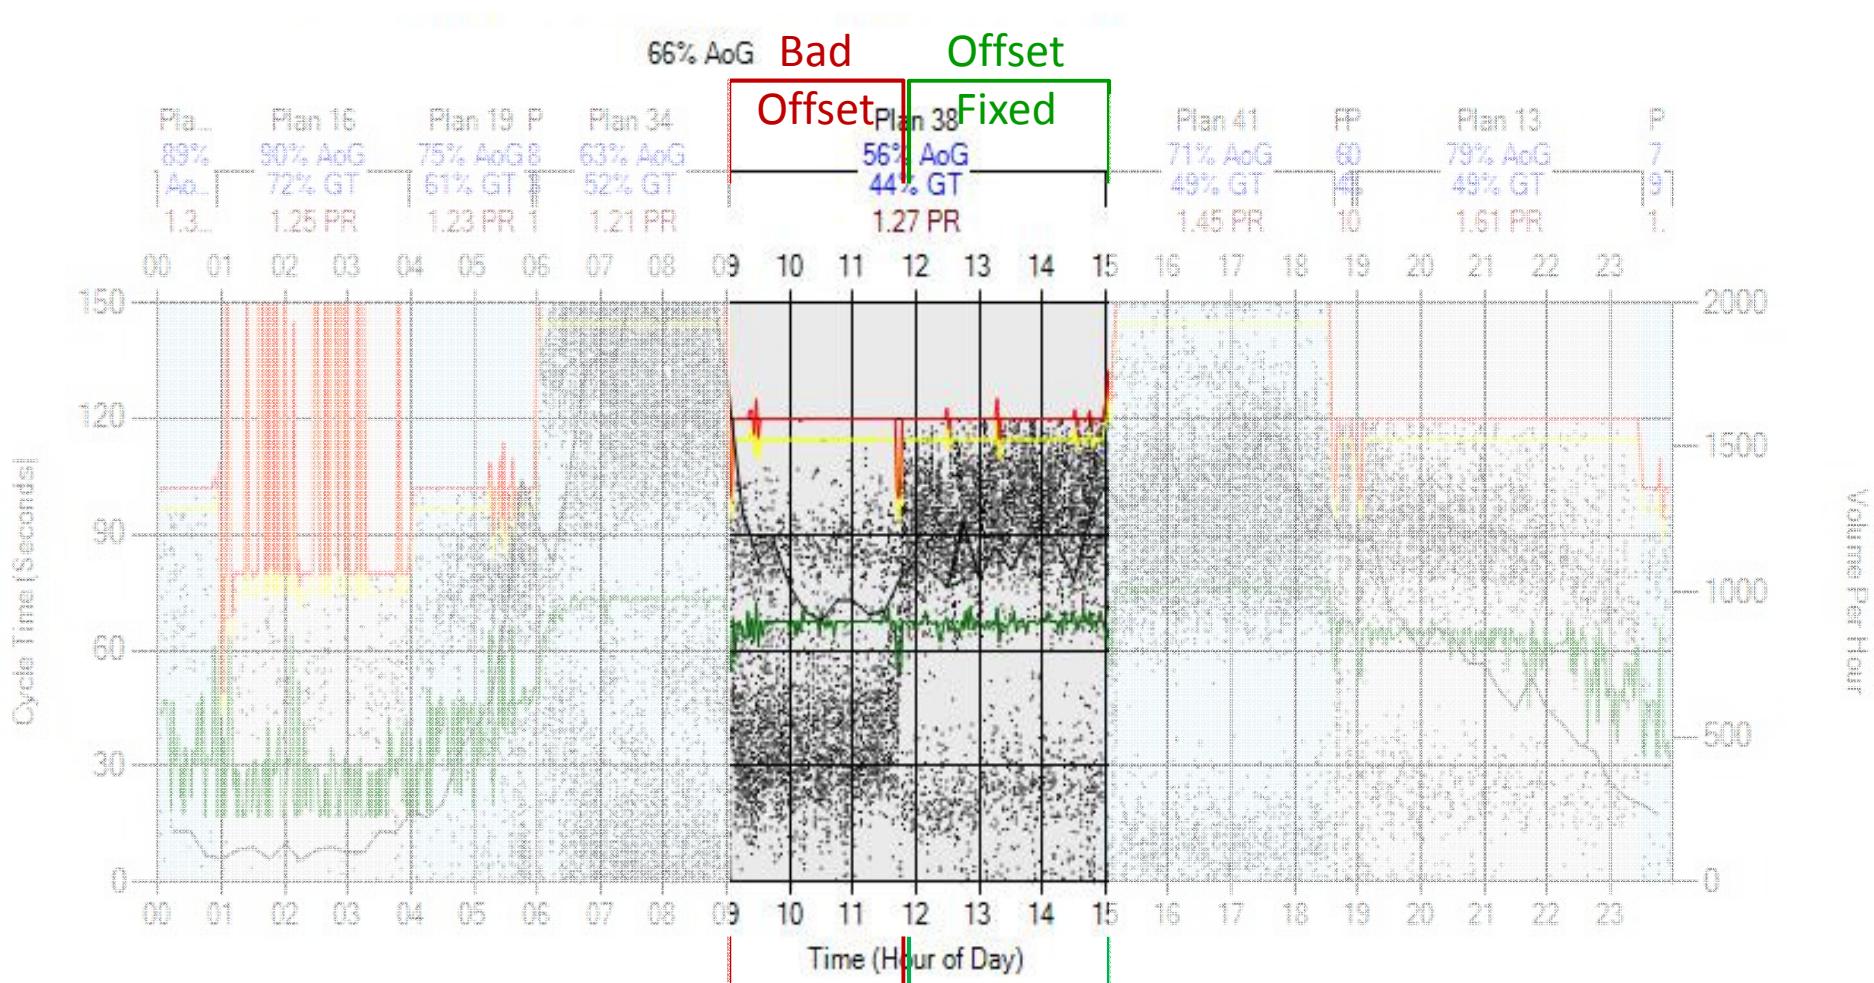

○ Skip

Metric: Purdue Phase Termination

Quality of Progression

NB Bangerter Hwy: New Off-Peak Coordination Plan (38) installed on March 7, 2013

Bangerter & 5400 S Intersection

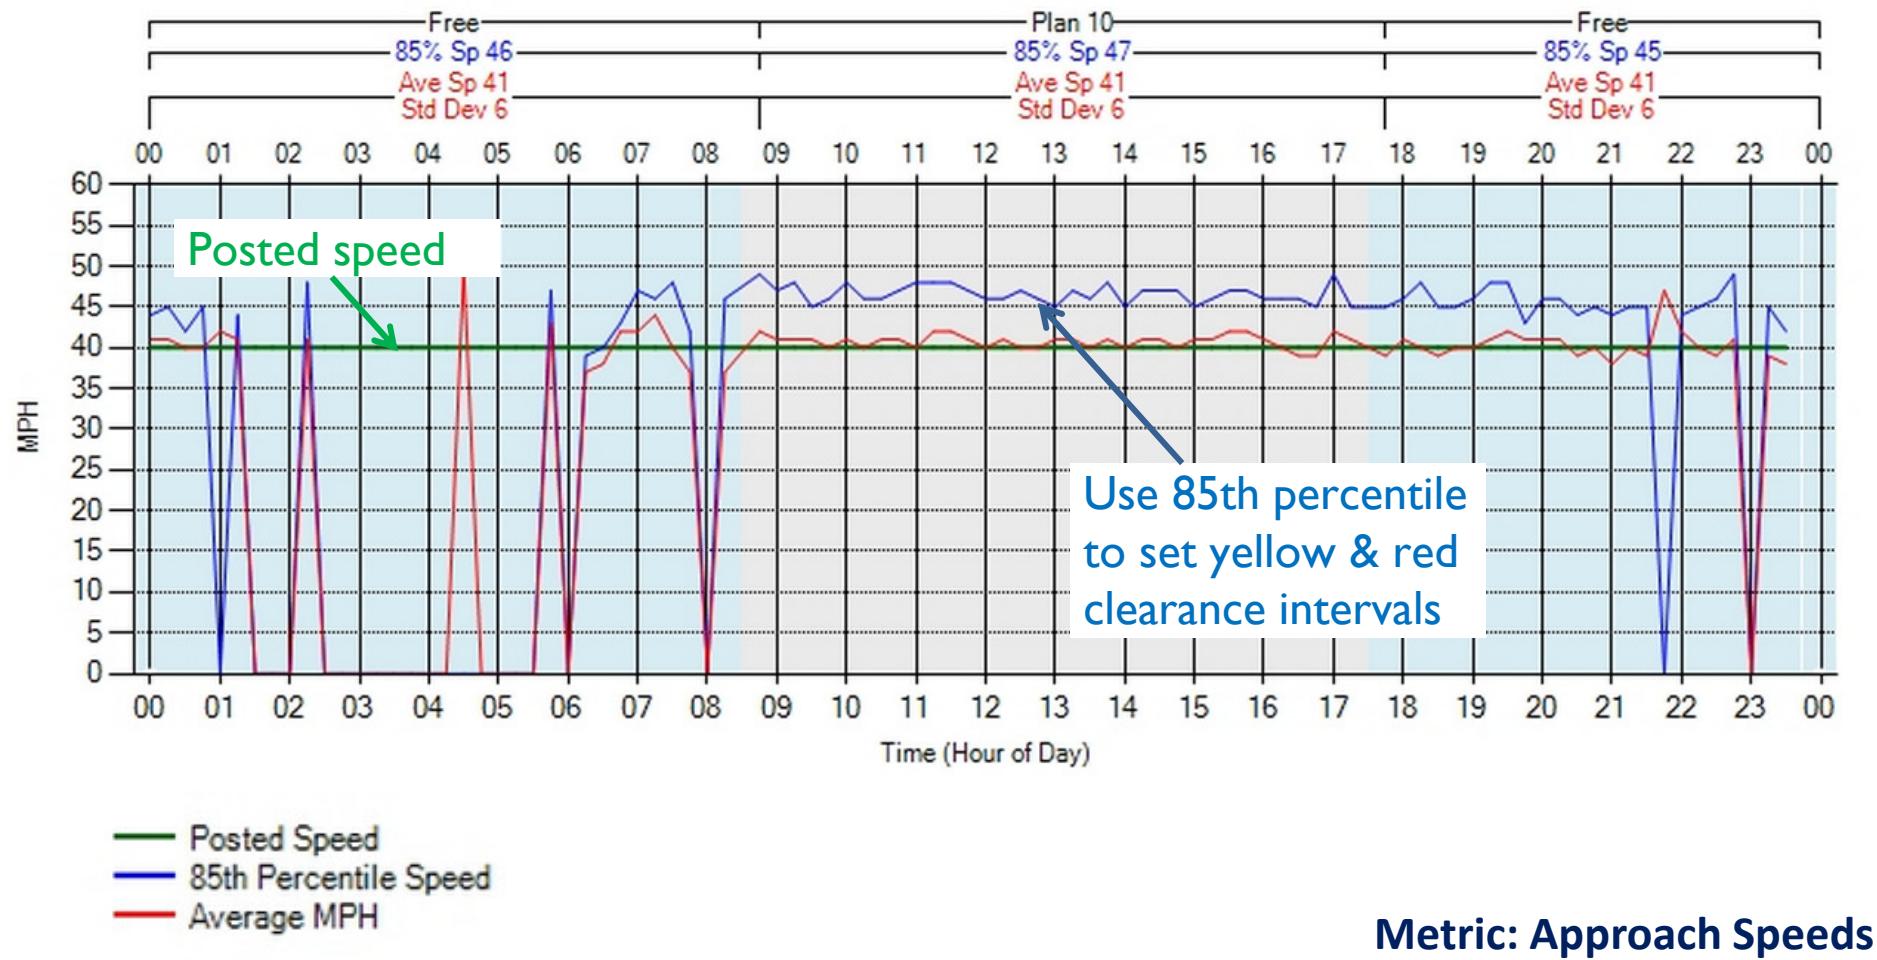

Metric: Purdue Coordination Diagram

Setting Yellow and All-Red using 85th-tile Speeds

Yellow Changed from 4.0 to 4.5 seconds

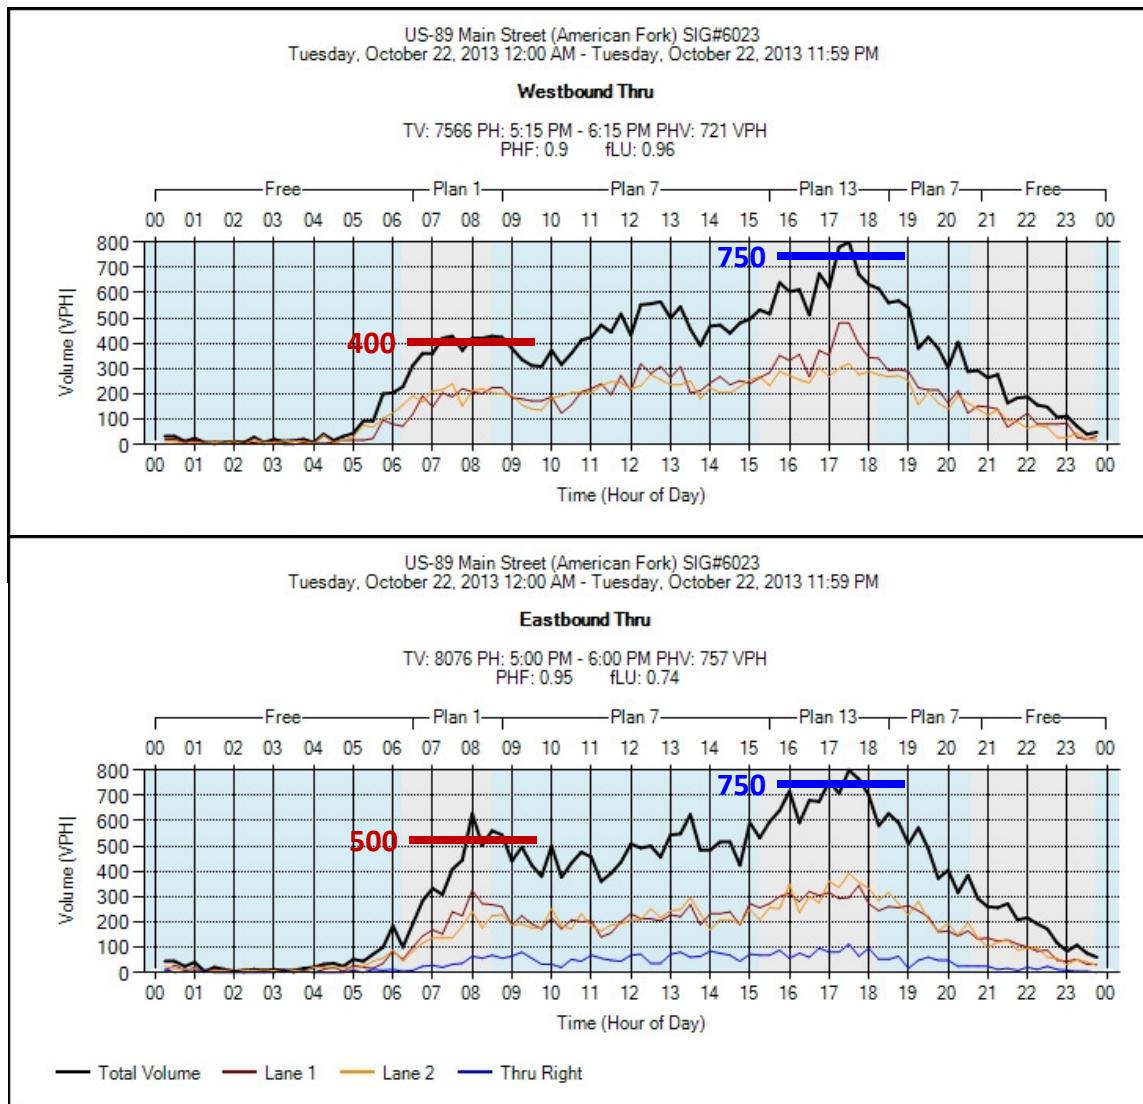

Location: NB Bluff St & 100 South, St George, UT – Sunday, May 5, 2013

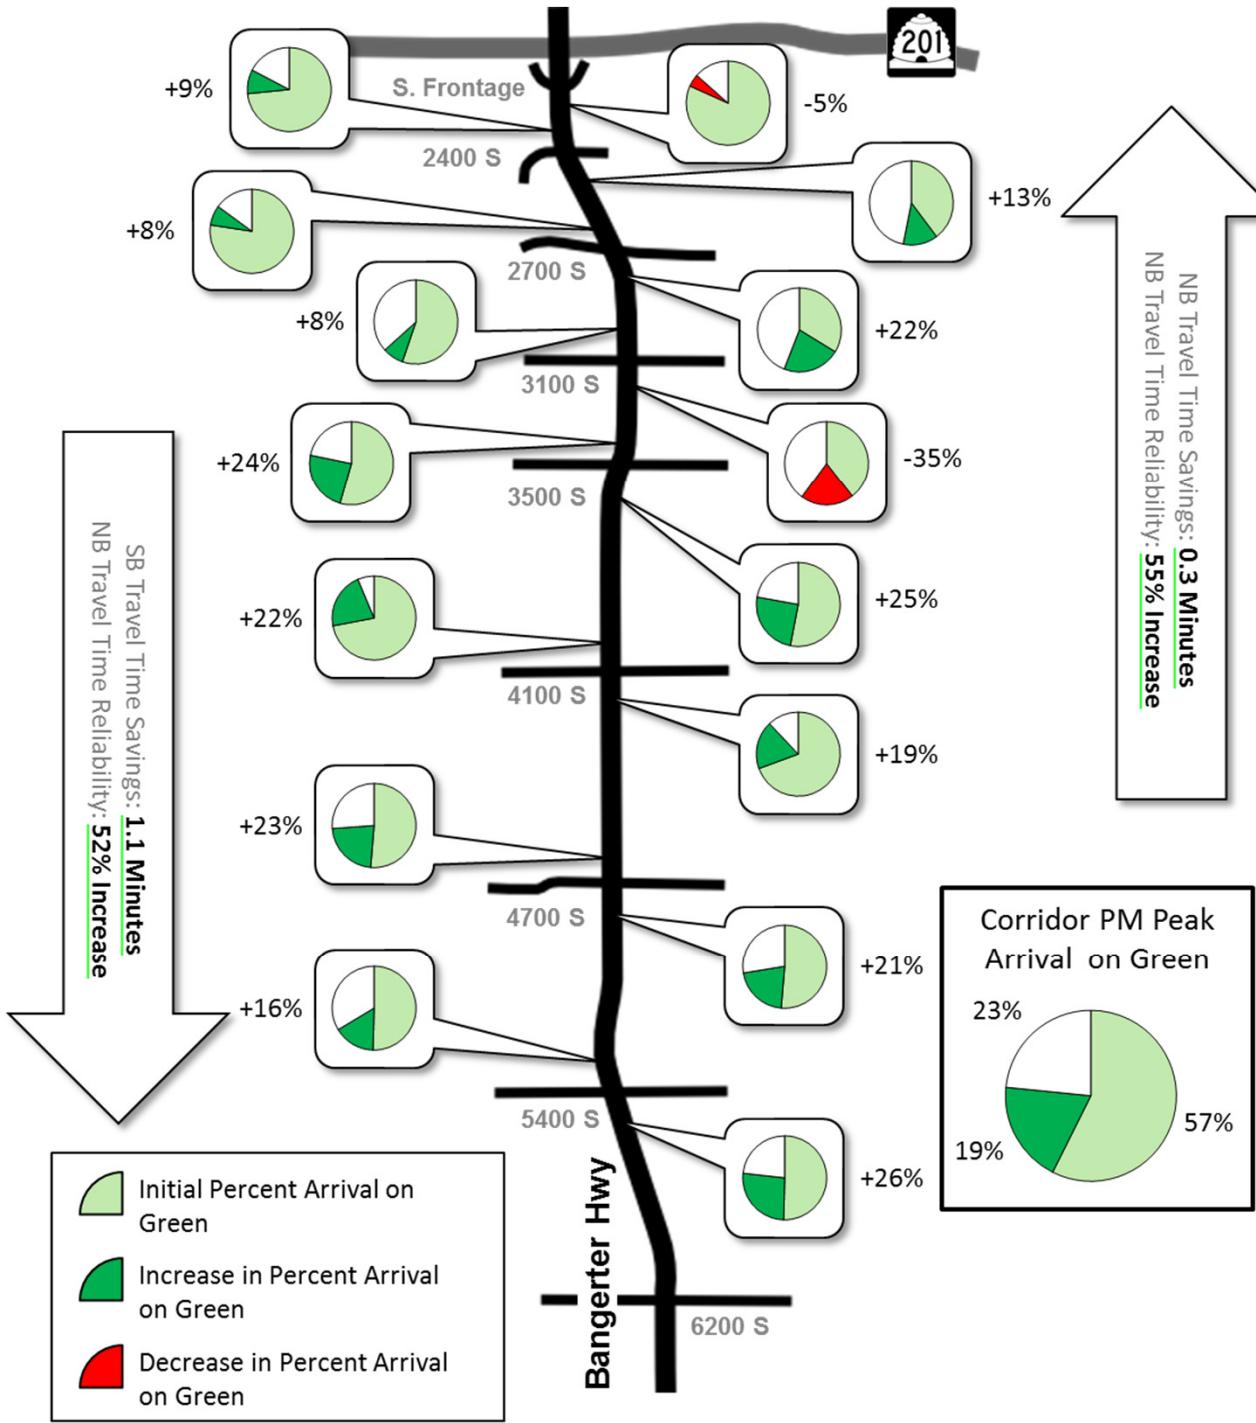

Lane-by-Lane Volume Counts

Use for models, adjust splits, coordination balance, traffic studies

Location: US-89 & Main St, American Fork, UT – Tuesday, October 22, 2013

Metric: Turning Movement Counts

Before and After Coordination

Corridor: Bangerter Hwy, SLC

To/From: SR-201 - 6200 South

Date: March 2013

Time Period: PM Peak

Results:

- 19% Increase Arrival on Green
- NB TT Savings: 0.3 Minutes
- NB Reliability: 55% Increase
- SB TT Savings: 1.1 Minute
- SB Reliability: 52% Increase

Metric: Executive Reports

Intersection Adjustments using SPMs

January 1, 2013 to December 31, 2013

- ▶ Adjustments made at 325+ intersections

- ▶ 185 work orders for detector problems
- ▶ 40 offset adjustments
- ▶ 5 time-of-day corrections
- ▶ Several other changes

Metric: Usage Reports

ACHIEVE YOUR AGENCY'S OBJECTIVES USING AUTOMATED TRAFFIC SIGNAL PERFORMANCE MEASURES

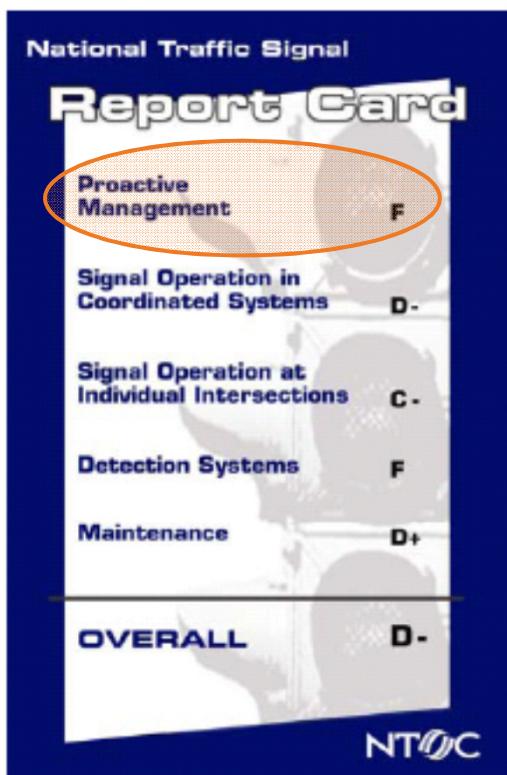

INSTITUTE OF TRANSPORTATION ENGINEERS WEBINAR PART 1 – APRIL 9, 2014
PRESENTED BY RICK DENNEY, FHWA, APRIL, 9 2013

FHWA Perspective

- ▶ Traffic Signal Report Card
- ▶ Traffic Signal Management (Good Basic Service)
- ▶ Asset Management
- ▶ Capability Maturity
- ▶ Planning for Operations and Systems Engineering
- ▶ Performance Management, Importance and Principles

Traffic Signal Report Card

Traffic Signal Management

- ▶ Good Basic Service
 - ▶ Objectives-Driven
 - ▶ Outcome-Oriented
 - ▶ Focused on what is important
 - ▶ What achieves agency vision and goals
 - ▶ What achieves motorist expectations

Good Basic Service

- ▶ Demands understanding of performance
 - ▶ For demonstration that program supports agencies vision and goals
 - ▶ For guidance to staff for day-to-day actions
 - ▶ For managing expectations
 - ▶ For achieving all that can be achieved

Asset Management

- ▶ Signal timing database ***is an asset***
 - ▶ It costs money and resources to develop
 - ▶ It costs money and resources to maintain
 - ▶ **Frequency** and **type** of maintenance are key issues...
 - ▶ ...that cannot be determined without understanding performance

Capability Maturity Model (SHRP2 Program)

- ▶ The **best agencies** depend on brilliant staff (Level 1), but are vulnerable to staff loss
- ▶ Mitigate that risk by developing brilliant processes (Level 2), but then vulnerable to becoming slaves to process
- ▶ Mitigate that risk by **measuring process effectiveness** (Level 3), and
- ▶ Optimizing processes against measurement (Level 4)

Planning for Operations and Systems Engineering

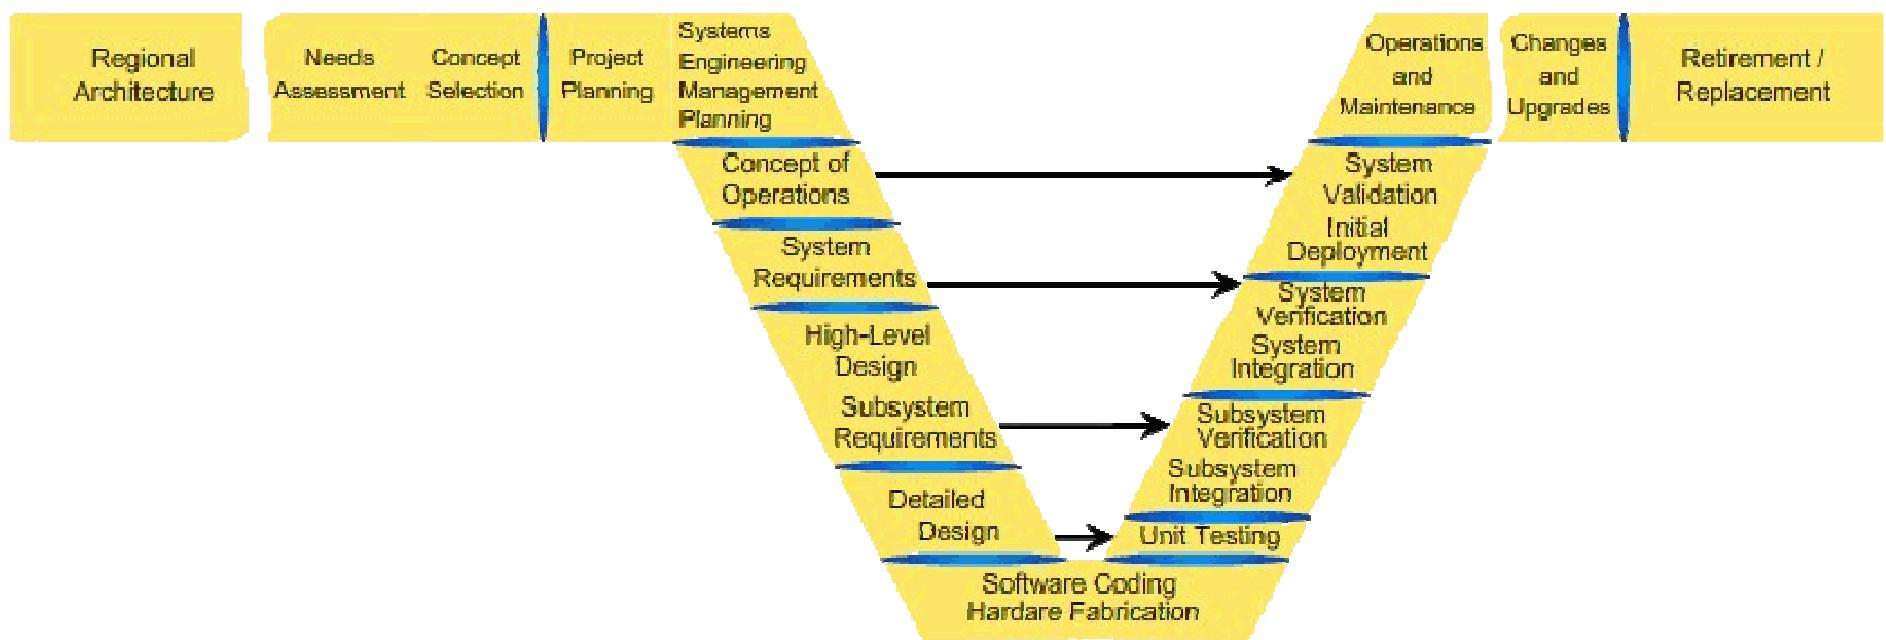

- ▶ Planning for Operations
 - ▶ Objectives-Driven
 - ▶ Performance measured against objectives
- ▶ Systems Engineering (23CFR940.11)
 - ▶ Needs and Requirements-Driven
 - ▶ Projects verified and validated against requirements and needs
 - ▶ Include performance measurement as use case

Planning For Operations Process

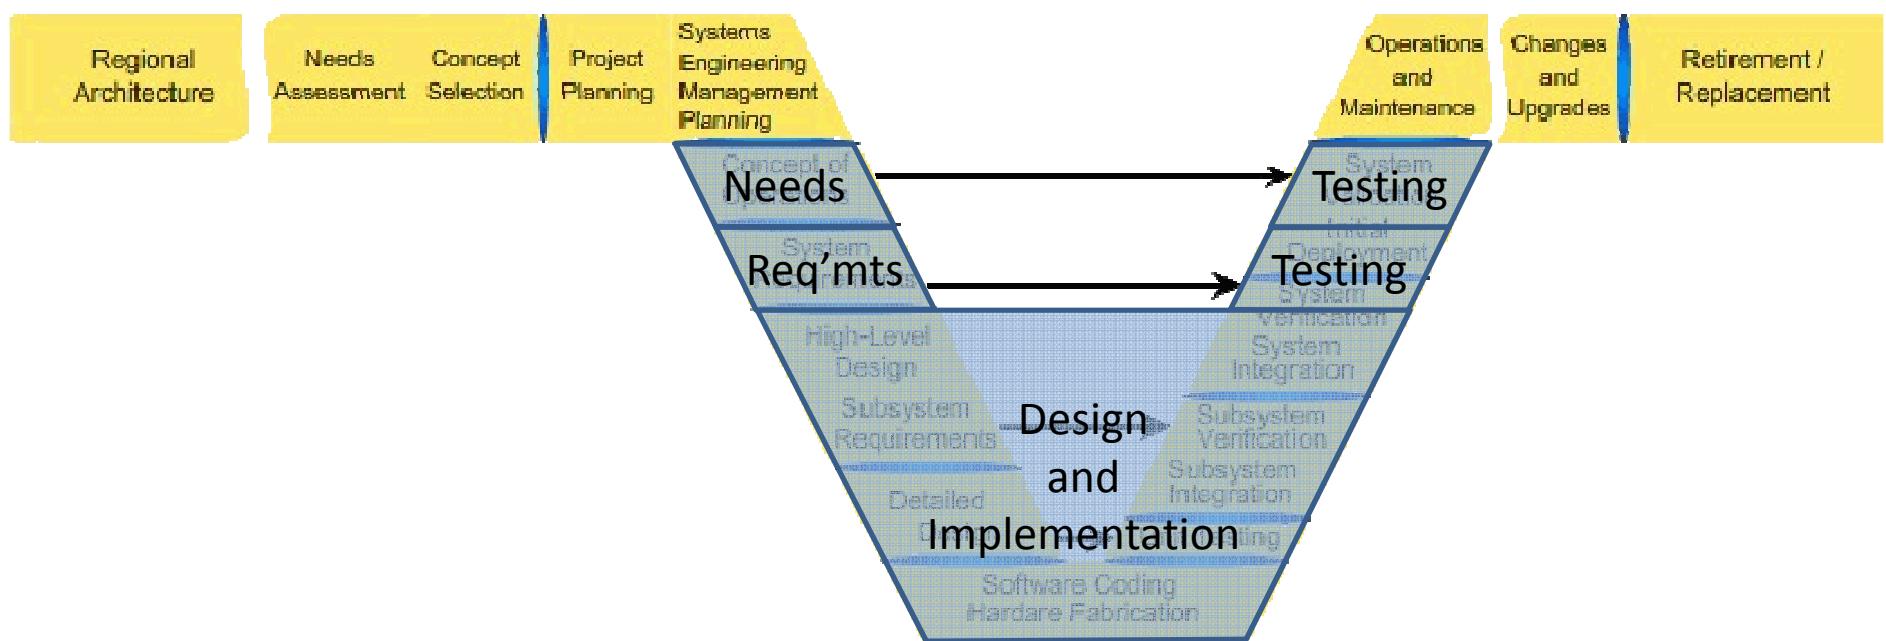

Systems Engineering Process

- Systems Engineering Guidebook

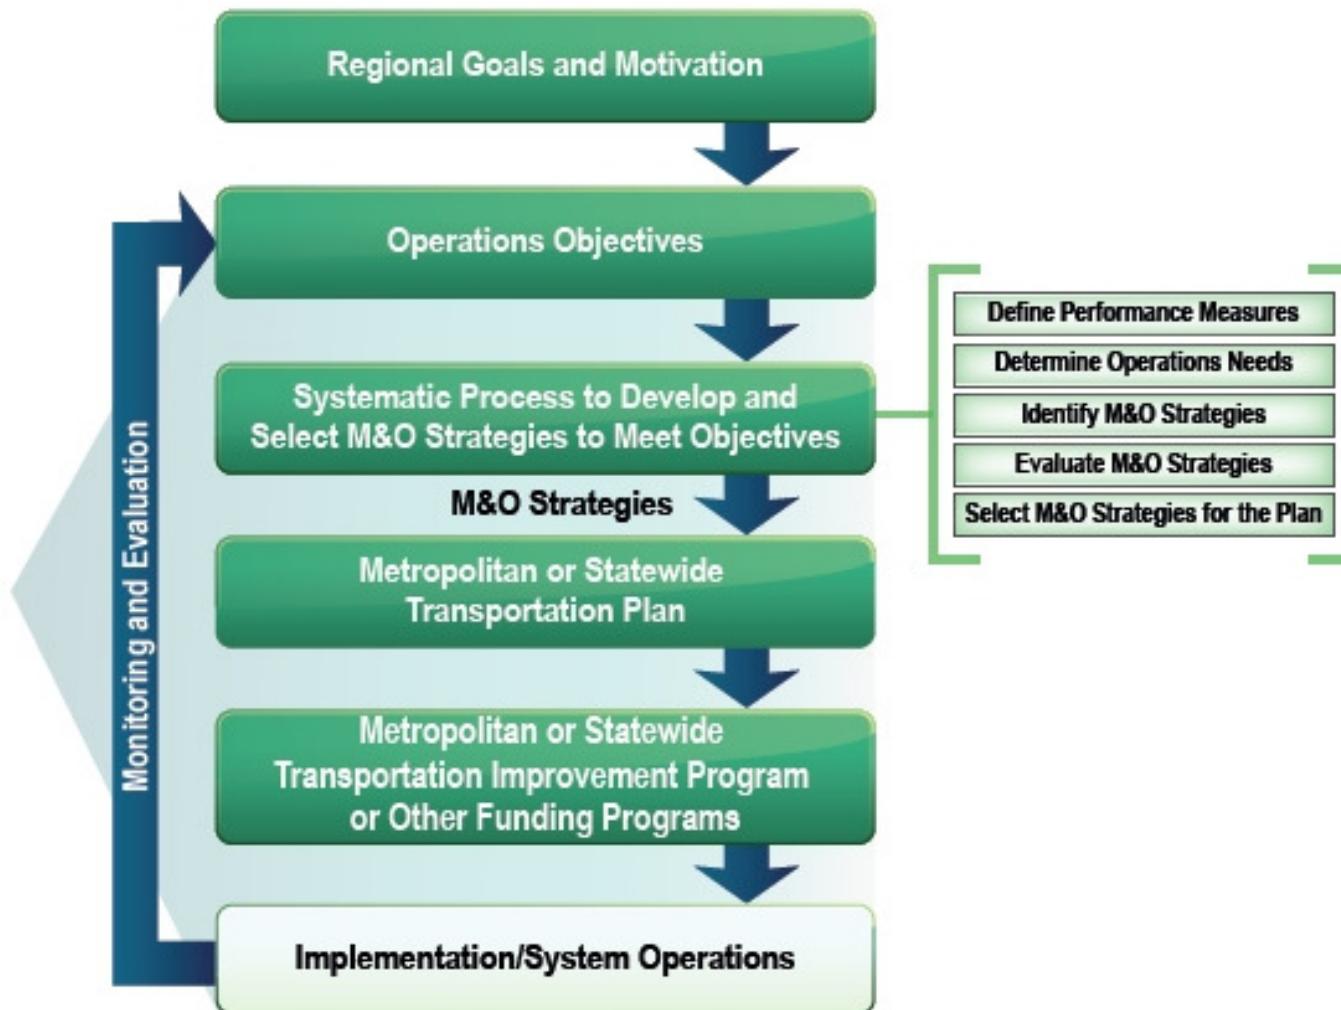

Systems Engineering Process

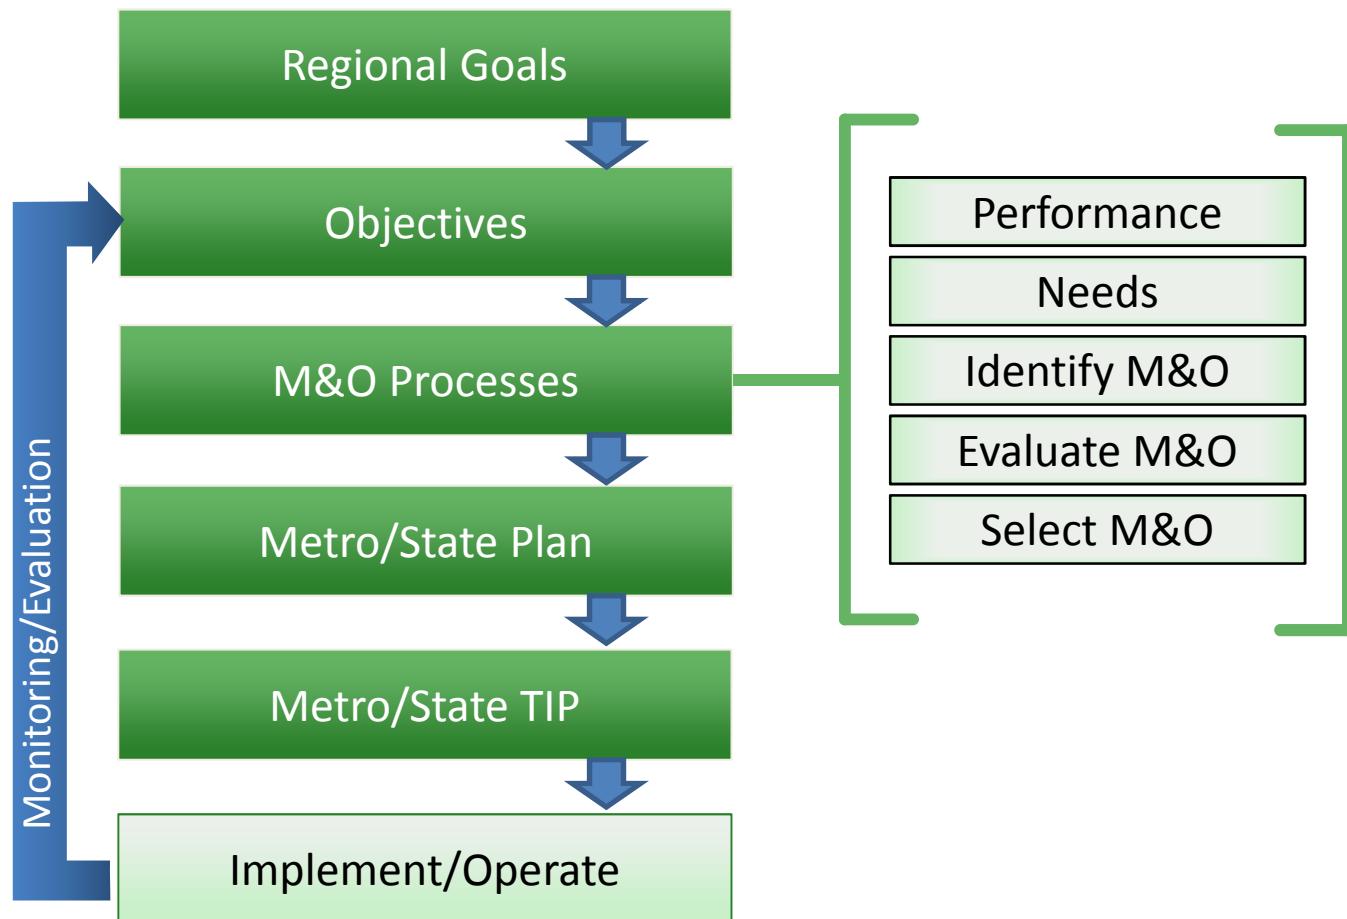

- Systems Engineering Guidebook

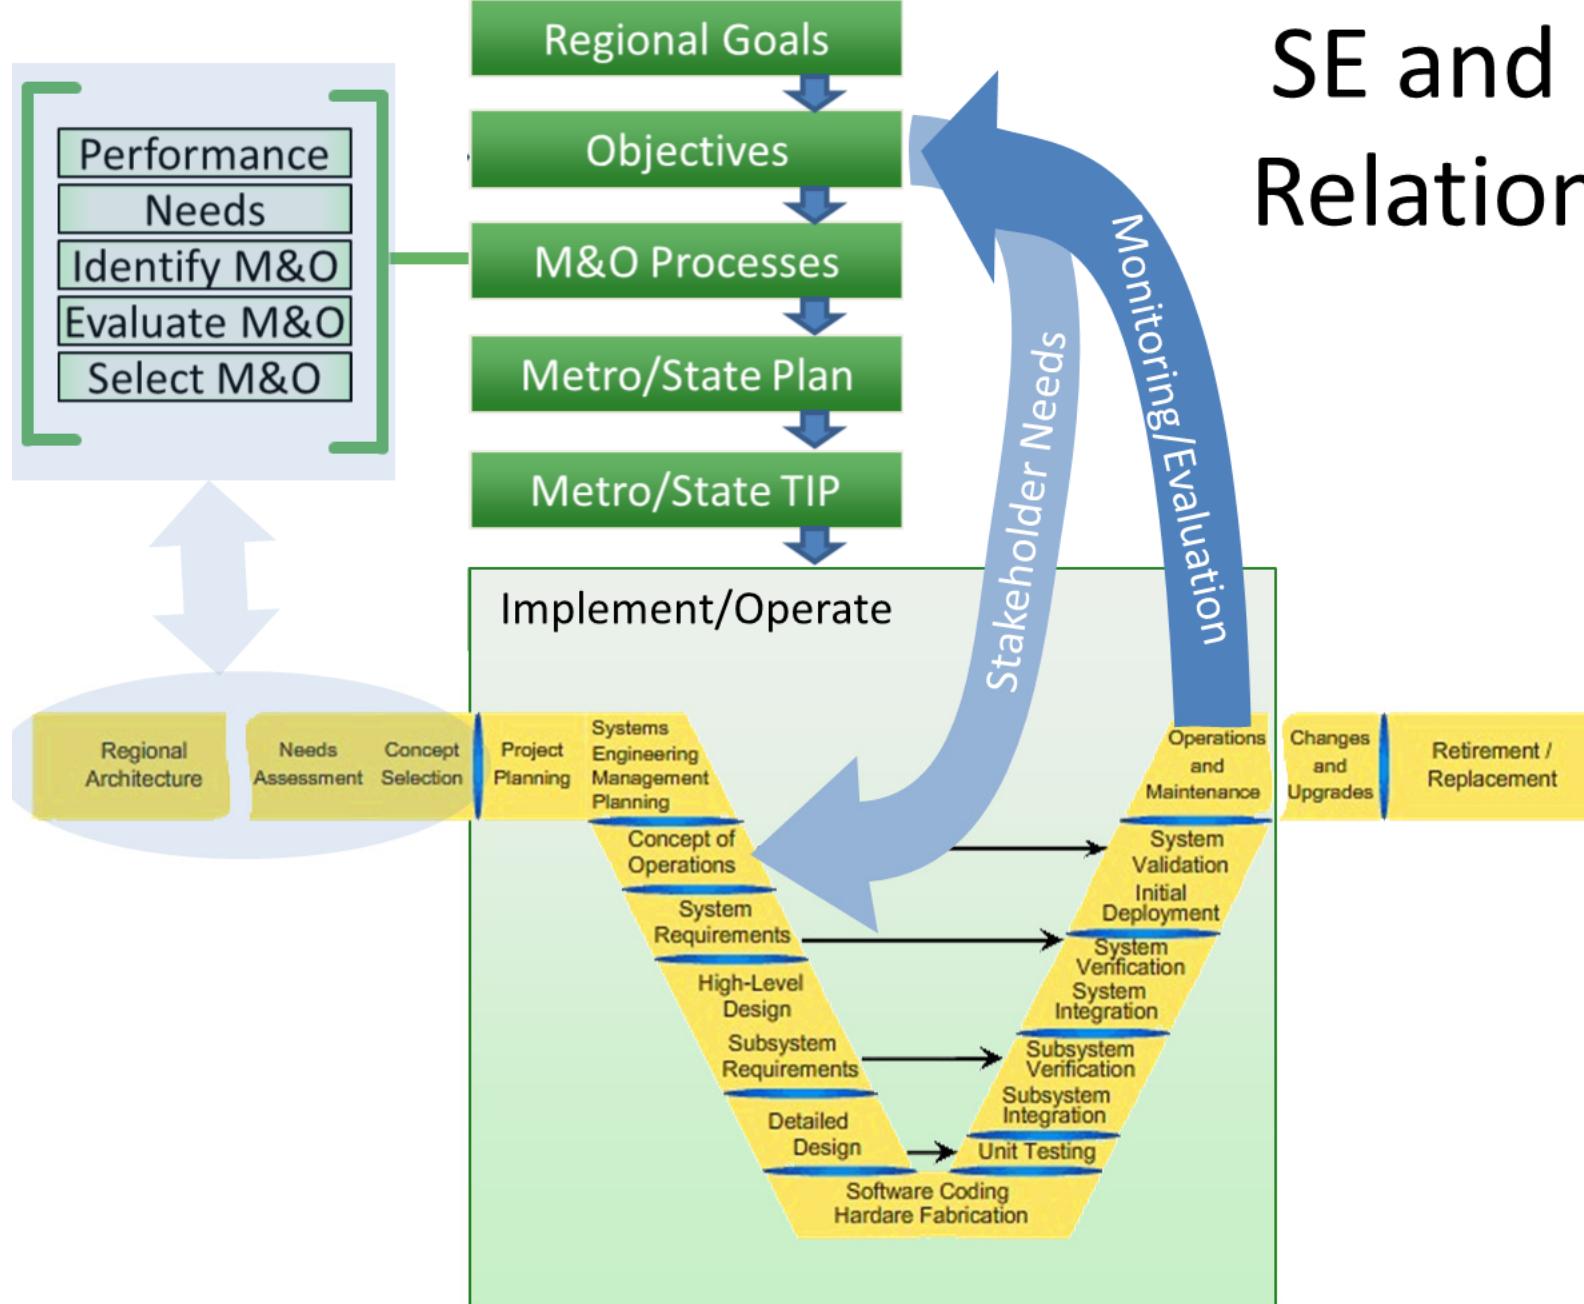

Planning For Operations Process

Planning For Operations Process

SE and P4O Relationship

Importance

- ▶ When resources are constrained:
 - ▶ Data is everything
 - ▶ Demonstrating effectiveness key to program sustainability and funding
 - ▶ Increasing use of performance basis for funding decisions
- ▶ Resources are always constrained

Effective Performance Measurement

- ▶ Is sensitive to agency goals
 - ▶ But that's not enough by itself
- ▶ Demonstrates achievement of objectives
 - ▶ Both funding objectives and engineering objectives
- ▶ Guides day-to-day operational decisions
 - ▶ Provide **actionable** operational assessment
- ▶ Guides decisions on *frequency* and *type* of operational resource expenditure
